Artificial Intelligence in Medicine and Surgery - An Exploration of Current Trends, Potential Opportunities, and Evolving Threats, Volume 3, 2026-02-25 Artificial intelligence AI and machine learning ML have become among the most powerful forces shaping our civilization Despite various predictions of doom and gloom the rumors of humans becoming replaced by artificially intelligent machines are slow to materialize This discrepancy between predictions and the observed reality most likely reflects the persistent importance of the human factor or the simple fact that there are no substitutes for human empathy intuition and creativity especially in the context of complex real life scenarios and cognitive challenges In addition to strong support for the viewpoint that AI is unlikely to replace humans but rather humans using AI may replace those who do not it is quickly becoming evident that effective AI design implementation and operations may be less successful if not severely impaired without ongoing human oversight and human content expert input Thus the overall AI ML based paradigm continues to evolve toward human AI synergy and the gradual evolution of human centric applications and processes We term this paradigm modern world plus AI and it is based on the reality that artificial intelligence is a human invention and inherits the very same shortcomings and biases as its creators It is also reasonable to propose that for AI to reach its fullest potential it must be inherently synergistic with humanity Consequently an honest and open discussion at the global level should take place ensuring that AI based systems are implemented in accordance with universally accepted social and behavioral standards and expectations including fundamental respect for humanity and human values and that corresponding ethical frameworks are grounded in a human centric agenda Robust and fool proof mechanisms are needed to prevent systematic biases from trickling into AI models across all applicable operational domains As we continue to examine any potential benefits risks and alternatives related to AI ML implementations both in healthcare and beyond we must make every effort to ensure that we create a future where humans actively decide and shape this modern world plus AI

evolutionary and synergistic paradigm and that human content experts and overseers have primary and overarching input into the entire spectrum of AI ML based system design implementation and practice based improvement Finally we must remember that the AI revolution creates a unique opportunity to achieve rapid global parity where no one is left behind and where humanity is given a chance to participate and develop to the fullest **The Next New** Pranjal Sharma,2023-05-26
