Alloway, 2014-10-27 It is hard to conceive of a classroom activity that does not involve working memory our ability to work with information In fact it would be impossible for students to learn without working memory From following instructions to reading a sentence from sounding out an unfamiliar word to calculating a math problem nearly everything a student does in the classroom requires working with information Even when a student is asked to do something simple like take out their science book and open it to page 289 they have to use their working memory Most children have a working memory that is strong enough to quickly find the book and open to the correct page but some don't approximately 10% in any classroom A student who loses focus and often daydreams may fall in this 10% A student who isn't living up to their potential may fall in this 10% A student who may seem unmotivated may fall in this 10% In the past many of these students would have languished at the bottom of the class because their problems seemed insurmountable and a standard remedy like extra tuition didn't solve them But emerging evidence shows that many of these children can improve their performance by focusing on their working memory Working memory is a foundational skill in the classroom and when properly supported it can often turn around a struggling student's prospects This book will make sure you are able to spot problems early work with children to improve their working memory and ensure they reach their full potential How does the

book work Each of the following chapters includes a description of the learning difficulty WHAT followed by an inside look into the brain of a student with the disorder WHERE their unique working memory profile WHY and classroom strategies to support working memory HOW There are two types of strategies general working memory strategies that can be applied to all students in your class and specific working memory strategies for each learning difficulty The final chapter Chapter 9 provides the student with tools to empower them along their learning journey The aim in supporting students with learning difficulties is not just to help them survive in the classroom but to thrive as well The strategies in the book can provide scaffolding and support that will unlock their working memory potential to boost learning They are designed to be easily integrated within the classroom setting as a dimension of an inclusive curriculum and used in developing an individualized education program IEP for the student The strategies recommended here can also complement existing programs that support a core deficit such as a social skills program for a student with autistic spectrum disorder or behavior modification for those with ADHD Each chapter also includes Try It box Provides the reader with an opportunity to have a hands on understanding of the material Science Flash box Gives the reader a snapshot of current and interesting research related to each chapter Current Debate box Discusses a controversial issue pertaining to the disorder Tracy Packiam Alloway is an award winning psychologist based at the University of North Florida Ross Alloway is the CEO of Memosyne Ltd a company that brings cutting edge scientific research to parents Multisystemic Therapy and Neighborhood Partnerships Cynthia Cupit Swenson, Scott W. National Education Commission on Time and Learning, 1994 The Education Council Act of 1991 established the National Education Commission on Time and Learning as an independent advisory body and called for a comprehensive review of the relationship between time and learning in U S schools This document serves as a supplementary volume to the commission s first report released in May 1994 which found that most school reform designs are structurally flawed by their adherence to a traditional school calendar This volume describes innovative approaches to the use of school time It provides nearly 40 examples of exemplary efforts to make better use of available time and extend the amount of time students spend learning The brief program descriptions are from 15 elementary schools 15 middle and senior high schools 4 districtwide efforts and 6 special programs They include public and private schools in rural urban and suburban areas from 26 states Information for reaching contact persons is provided A review of the programs indicates that many different kinds of schools and districts have already implemented many of the commission s recommendations The most common approaches in descending order include 1 redesigning available time 2 employing technology 3 extending the school day or year 4 providing time for professional development and 5 providing support services for children or families Finally the approaches to the redesign of time usage differ by school level LMI *The Mathematics Teacher*, 1930 *Bulletin* Bard College, 1893 Catalogue of the Corporation, Faculty and Students Amherst College, 1886 Public Documents of Massachusetts
