Analysis Derbali, Abdelkader Mohamed Sghaier, 2025-04-08 The revolution of artificial intelligence AI impacts various business sectors including accounting and finance Machine intelligence is on the rise in human interaction as novel technologies automate tasks and enhance human capabilities at an increasingly rapid rate While AI has the potential to assist in the identification and management of risks such as in financial risk measurement analysis and management the disruptive nature of these emerging technologies introduces new and complex scenarios Utilizing these technologies to facilitate decision making processes could result in biased inequitable and unreliable decisions giving rise to concerns regarding data privacy and security Further research is necessary to understand the implications of AI in financial practices Artificial Intelligence for Financial Risk Management and Analysis delves into the most recent advancements in AI technologies that facilitate risk analysis and decision making It examines the potential risks these technologies pose to individuals businesses and establishments Covering topics such as firm management automation and long short term memory LSTM networks this book is an excellent resource for financial advisors banking professionals computer scientists professionals researchers academicians and more

Neural Network Projects with Python James Loy, 2019-02-28 Build your Machine Learning

portfolio by creating 6 cutting edge Artificial Intelligence projects using neural networks in Python Key Features Discover

neural network architectures like CNN and LSTM that are driving recent advancements in AI. Build expert neural networks in Python using popular libraries such as Keras. Includes projects such as object detection, face identification, sentiment analysis, and more. Book Description: Neural networks are at the core of recent AI advances, providing some of the best resolutions to many real-world problems, including image recognition, medical diagnosis, text analysis, and more. This book goes through some basic neural network and deep learning concepts, as well as some popular libraries in Python for implementing them. It contains practical demonstrations of neural networks in domains such as fare prediction, image classification, sentiment analysis, and more. In each case, the book provides a problem statement, the specific neural network architecture required to tackle that problem, the reasoning behind the algorithm used, and the associated Python code to implement the solution from scratch. In the process, you will gain hands-on experience with using popular Python libraries such as Keras to build and train your own neural networks from scratch. By the end of this book, you will have mastered the different neural network architectures and created cutting-edge AI projects in Python that will immediately strengthen your machine learning portfolio. What you will learn: Learn various neural network architectures and their advancements in AI. Master deep learning in Python by building and training neural networks for regression and classification. Discover convolutional neural networks for image recognition. Learn sentiment analysis on textual data using Long Short-Term Memory. Build and train a highly accurate facial recognition security system. Who this book is for: This book is a perfect match for data scientists, machine learning engineers, and deep learning enthusiasts who wish to create practical neural network projects in Python. Readers should already have some basic knowledge of machine learning and neural networks.

Artificial Intelligence in Education Alexandra I. Cristea, Erin Walker, Yu Lu, Olga C. Santos, Seiji Isotani, 2025-07-17
