Thank You America Ngombe Mayunda, 2017-04-17 This book is about showing my gratitude to some amazing people Most of them are Americans for the good they had demonstrated to me my family and my original country the DRC Congo Kinshasa from the year 1884 I wanted them to know that their kind acts will never be forgotten So from the bottom of my heart I say thank you to all of them and thank you to America where they came from **Regulating Convergence** Susan J.

Drucker, Gary Gumpert, 2010 Traditionally the technologies of telecommunications broadcasting satellite and computing operated independently while the industries associated with each were regulated independently along the same lines Technological convergence challenges the vertical regulatory models of broadcasting telecommunications and computer services while simultaneously challenging the traditional approach to regulation by nation states It is time for a critical examination of regulations which support convergence while addressing the realities of the current media environment This edited volume provides a heuristic analysis of the challenges facing regulators and media institutions Chapters explore the nature of the laws and regulations straining under the new technological realities consider the changes already made to accommodate the new media landscape and examine new directions and approaches to the regulation of convergent media technologies and media institutions *Organic Computing - Technical Systems for Survival in the Real World* Christian Müller-Schloer, Sven Tomforde, 2017-12-28 This book is a comprehensive introduction into Organic Computing OC presenting systematically the current state of the art in OC It starts with motivating examples of self organising self adaptive and emergent systems derives their common characteristics and explains the fundamental ideas for a formal characterisation of such systems Special emphasis is given to a quantitative treatment of concepts like self organisation emergence autonomy robustness and adaptivity The book shows practical examples of architectures for OC systems and their applications in traffic control grid computing sensor networks robotics and smart camera systems The extension of single OC systems into collective systems consisting of social agents based on concepts like trust and reputation is explained OC makes heavy use of learning and optimisation technologies a compact overview of these technologies and related approaches to self organising systems is provided So far OC literature has been published with the researcher in mind Although the existing books have tried to follow a didactical concept they remain basically collections of scientific papers A comprehensive and systematic account of the OC ideas methods and achievements in the form of a textbook which lends itself to the newcomer in this field has been missing so far The targeted reader of this book is the master student in Computer Science Computer Engineering or Electrical Engineering or any other newcomer to the field of Organic Computing with some technical or Computer Science background Readers can seek access to OC ideas from different perspectives OC can be viewed 1 as a philosophy of adaptive and self organising life like technical systems 2 as an approach to a more quantitative and formal understanding of such systems and finally 3 a construction method for the practitioner who wants to build such systems In this book we first try to

convey to the reader a feeling of the special character of natural and technical self organising and adaptive systems through a large number of illustrative examples Then we discuss quantitative aspects of such forms of organisation and finally we turn to methods of how to build such systems for practical applications
