Dopamine Kids and Michaeleen Doucleff's Science-Based Plan Reid Reflections, 2026-03-07 Nearly everything you've been told about

why your child can't put down their device is wrong Dopamine is not the pleasure chemical It is the brain's motivation signal and modern screens and ultraprocessed foods have learned to exploit it with a precision that no previous generation of parents has had to contend with The result is not a child who enjoys screens too much It is a child whose brain has been engineered into a motivational loop that delivers constant wanting without ever delivering genuine satisfaction leaving them more anxious more reactive and less capable of genuine engagement with the world around them than they would otherwise be Once you understand the mechanism accurately the solution becomes clear Drawing on the latest neuroscience of dopamine habit formation and child development this book presents a five step science based operating manual for habit remodelling built specifically for parents and the children in their care It is not a call to eliminate screens or wage war on processed food It is a practical framework for shifting the power dynamic so that devices and food become tools your family controls rather than forces that control your family Inside you will find The accurate neuroscience of dopamine that mainstream media got wrong and why the distinction between wanting and enjoying changes everything about how you respond to your child's screen use A five step habit remodelling plan that addresses screens and ultraprocessed food simultaneously because the two exploit the same neurological system and are most effectively addressed together A complete four week implementation guide structured week by week that takes the plan from concept into daily practice with specific protocols for the inevitable setbacks of Week 3 that most families never anticipate and therefore never survive The science of successful limit setting why willpower based rules fail and what structure based limits do instead A replacement activity framework built on the neurological criteria that make activities genuinely compelling not simply parent approved A home environment redesign protocol that removes the triggers pulling your children back before they ever fire a craving A celebration system grounded in the neuroscience of habit consolidation the mechanism that determines whether new behaviors become automatic or gradually erode A long game framework for raising screen resilient children across the full arc of childhood and adolescence including the developmental arc of the teen years This book includes practical exercises key insights an action plan and key concepts in every chapter designed for parents who want to understand what they are doing and why not simply follow instructions they have been handed The anxious generation has already been diagnosed This is the handbook for what to do about it for the families who still have children at home and years ahead of them to build something different
