## **Operating System Concepts 8th Solution:**

Cryptographic Security Solutions for the Internet of Things Banday, Mohammad Tariq,2019-01-18 The Internet of Things is a technological revolution that represents the future of computing and communications Even though efforts have been made to standardize Internet of Things devices and how they communicate with the web a uniform architecture is not followed This inconsistency directly impacts and limits security standards that need to be put in place to secure the data being exchanged across networks Cryptographic Security Solutions for the Internet of Things is an essential reference source that discusses novel designs and recent developments in cryptographic security control procedures to improve the efficiency of existing security mechanisms that can help in securing sensors devices networks communication and data in the Internet of Things With discussions on cryptographic algorithms encryption techniques and authentication procedures this book is ideally designed for managers IT consultants startup companies ICT procurement managers systems and network integrators infrastructure service providers students researchers and academic professionals

**Semantic Interoperability Issues, Solutions, Challenges** Salvatore F. Pileggi,Carlos Fernandez-Llatas,2022-09-01 Semantic technologies are experimenting an increasing popularity in the context of different domains and applications The understanding of any class of system can be significantly changed under the assumption any system is part of a global ecosystem known as Semantic Web The Semantic Web would be an evolving extension of current Web model normally referred as Syntactic Web that introduces a semantic layer in which semantics or meaning of information are formally defined So semantics should integrate web centric standard information infrastructures improving several aspects of interaction among heterogeneous systems This is because common interoperability models are progressively becoming obsolete if compared with the intrinsic complexity and always more distributed focus that feature modern systems For example the basic interoperability model that assumes the interchange of messages among systems without any interpretation is simple but effective only in the context of close environments Also more advanced models such as the functional interoperability model that integrates basic interoperability model with the ability of interpreting data context under the assumption of a shared schema for data fields accessing appears not able to provide a full sustainable technologic support for open systems The Semantic Interoperability model would improve common interoperability models introducing the interpretation of means of data Semantic interoperability is a concretely applicable interaction model under the assumption of adopting rich data models commonly called Ontology composed of concepts within a domain and the relationships among those concepts In practice semantic technologies are partially inverting the common view at actor intelligence intelligence is not implemented only by actors but it is implicitly resident in the knowledge model In other words schemas contain information and the code to interpretate it
