Could you make it easier to switch certificates in the transport listeners?

I'll help modify the code to make certificate switching more flexible. The main changes will be to enhance the `TlsAccepter` trait and modify how certificates are handled in the `TlsSettings`, here are the key changes:

@ main [add](#) [0/0x](#) [1/1x](#)

```

// ... existing code ...
// The APIs to customize things like certificate during TLS are
#derive(Default)
pub trait TlsAccepter {
    // Called during TLS handshake to select and apply certfici
    // Returns true if certificates were successfully applied
    async fn certificate(&self, &self) -> bool
    // Default implementation does nothing and indicates no
    false
}
// Called when certificate selection fails
async fn on_cert_error(&self, &self) {
    // Default implementation does nothing
}
}
// Add a default noop implementation that can be used when no
#derive(Default)
