Concrete Abstractions Wolfgang Schreiner, 2023-04-11 This book demonstrates how to

formally model various mathematical domains including algorithms operating in these domains in a way that makes them amenable to a fully automatic analysis by computer software. The presented domains are typically investigated in discrete mathematics, logic, algebra, and computer science; they are modeled in a formal language based on first order logic which is sufficiently rich to express the core entities in whose correctness we are interested: mathematical theorems and algorithmic specifications. This formal language is the language of RISCAL, a mathematical model checker by which the validity of all formulas and the correctness of all algorithms can be automatically decided. The RISCAL software is freely available; all formal contents presented in the book are given in the form of specification files by which the reader may interact with the software while studying the corresponding book material.

BICS 2008 Calin Enachescu, Barna Laszlo Iantovics, F. G. Filip, 2009-05-26. This book contains selected papers presented at the International Conference Bio Inspired Computational Methods Used for Difficult Problems Solving: Development of Intelligent and Complex Systems (BICS 2008) organized by the Romanian Academy, Bucharest and Petru Major University of Tg Mures, held on 5-7 November 2008 at Petru Major University of Tg Mures, Romania. The aim of this conference was to bring together researchers working in the main areas of Complex Systems, Artificial Intelligence, Intelligent Systems, and Natural Computing for presenting their recent results and exchanging ideas. The papers included in the book provide an introduction and also a state of the art to the bio-inspired computer science. The areas covered were those of natural computing such as evolutionary and neural computing as well as younger research directions such as DNA computing, ant colony optimization with connections and applications to intelligent complex systems and to medical informatics. Thus, both directions of research from biology to informatics and from informatics to biology are illustrated.

Dr. Dobb's Journal, 2006. [Algorithms Unlocked](#) Thomas H. Cormen, 2013-03-01. For anyone who has ever wondered how computers solve problems, an engagingly written guide for nonexperts to the basics of computer algorithms. Have you ever wondered how your GPS can find the fastest way to your destination, selecting one route from seemingly countless possibilities in mere seconds? How your credit card account number is protected when you make a purchase over the Internet? The answer is algorithms. And how do these mathematical formulations translate themselves into your GPS, your laptop, or your smart phone? This book offers an engagingly written guide to the basics of computer algorithms. In *Algorithms Unlocked*, Thomas Cormen, coauthor of the leading college textbook on the subject, provides a general explanation with limited mathematics of how algorithms enable computers to solve problems. Readers will learn what computer algorithms are, how to describe them, and how to evaluate them. They will discover simple ways to search for information in a computer, methods for rearranging information in a computer into a prescribed order, sorting, how to solve basic problems that can be modeled in a computer with a mathematical structure called a graph, useful for modeling road networks, dependencies among tasks, and financial relationships; how to solve problems that ask questions about strings of characters such as DNA structures; the basic principles behind cryptography; fundamentals of data compression; and even that there are some problems that no

one has figured out how to solve on a computer in a reasonable amount of time

Proceedings of the Twenty-Second Annual ACM Symposium on Principles of Distributed Computing, 2003 This paper presents an efficient asynchronous protocol to compute RSA inverses with respect to a public RSA modulus N whose factorization is secret and shared among a group of parties Given two numbers x and e the protocol computes y such that $ye \equiv x \pmod{N}$ A synchronous protocol for this task has been presented by Catalano Gennaro and Halevi Eurocrypt 2000 but the standard approach for turning this into an asynchronous protocol would require a Byzantine agreement sub protocol Our protocol adopts their approach but exploits a feature of the problem in order to avoid the use of a Byzantine agreement primitive Hence it leads to efficient asynchronous protocols for threshold signatures and for Byzantine agreement based on the strong RSA assumption without the use of random oracles
