ABOUT THE AUTHOR

The Author - Ted Hart got his license (WSQR) in 1948 and has been continuously active. Because of an early interest in Ham Radio, Ted had a very long and enjoyable career as an Electronic Engineer before retiring in 1996. Incidentally, other items Ted developed for Ham Radio include the Antenna Noise Bridge, the Small Loop Antenna, and many other items and concepts printed in Ham and Professional Magazine articles.

INTRODUCTION

This book takes the reader through the basic EH-Antenna concept and guides the reader through the detailed design and construction of a working Ham EH-Antenna, and provides the tools to design an EH Antenna for any specific application.

The EH-Antenna provides a unique combination of improved efficiency and real estate conserving features to make the antenna attractive to old and new Hams alike. It is one of the only alternatives for the space stricken Ham in the urban areas. EH Antennas have repeatedly given good and consistent results when built, tuned, and used the way they are designed. As the aerial is very small and inexpensive to build with commonly found materials, it's an aerial I warmly recommend for confined spaces or stealth applications even in the developing countries. As an added feature, the EH-Antenna is easily hidden and very stealthy compared to a dipole or any vertical aerial. I have a couple of hoosterw EH-Antennas in my attic and I have no complaints from my neighbors.

Although the EH-Antenna was conceived a few years ago (1996), it has not yet gained wide acceptance. New ideas sometimes take time to grow, but there has been a great deal of confusion about this technology as a result of new principles that must be incorporated. The purpose of this book is to clarify the theory and to provide information to the public that will allow any ham to build an EH
