**AI in Banking** Liyu Shao, Qin Chen, Min He, 2025-05-12 Big data and artificial intelligence AI cannot remain limited to academic theoretical research It is crucial to utilize them in practical business scenarios enabling cutting edge technology to

generate tangible value This book delves into the application of AI from theory to practice offering detailed insights into AI project design and code implementation across eleven business scenarios in four major sectors retail banking e banking bank credit and tech operations It provides hands on examples of various technologies including automatic machine learning integrated learning graph computation recommendation systems causal inference generative adversarial networks supervised learning unsupervised learning computer vision reinforcement learning fuzzy control automatic control speech recognition semantic understanding Bayesian networks edge computing and more This book stands as a rare and practical guide to AI projects in the banking industry By avoiding complex mathematical formulas and theoretical analyses it uses plain language to illustrate how to apply AI technology in commercial banking business scenarios With its strong readability and practical approach this book enables readers to swiftly develop their own AI projects

### **Robot Operating System (ROS)**

Anis Koubaa,2018-07-05 Building on the successful first and second volumes this book is the third volume of the Springer book on the Robot Operating System ROS The Complete Reference The Robot Operating System is evolving from year to year with a wealth of new contributed packages and enhanced capabilities Further the ROS is being integrated into various robots and systems and is becoming an embedded technology in emerging robotics platforms The objective of this third volume is to provide readers with additional and comprehensive coverage of the ROS and an overview of the latest achievements trends and packages developed with and for it Combining tutorials case studies and research papers the book consists of sixteen chapters and is divided into five parts Part 1 presents multi robot systems with the ROS In Part 2 four chapters deal with the development of unmanned aerial systems and their applications In turn Part 3 highlights recent work related to navigation motion planning and control Part 4 discusses recently contributed ROS packages for security ROS2 GPU usage and real time processing Lastly Part 5 deals with new interfaces allowing users to interact with robots Taken together the three volumes of this book offer a valuable reference guide for ROS users researchers learners and developers alike Its breadth of coverage makes it a unique resource

### Interactive Computer Graphics Edward Angel,2006

Interactive Computer Graphics fourth edition presents introductory computer graphics concepts using a proven top down programming oriented approach and careful integration of OpenGL to teach core concepts The fourth edition has been revised to more closely follow the OpenGL pipeline architecture and includes a new chapter on programmable hardware topics vertex shaders As with previous editions readers learn to program three dimensional applications as soon as possible The Fourth edition focuses on core theory in graphics Topics such as light material interactions shading modeling curves and surfaces antialiasing texture mapping and compositing and hardware issues are covered
