one of the central debates in contemporary philosophy of science On the one hand scientific realists argue that we have good reasons to believe that our best scientific theories are approximately true because if they were not even approximately true they would not be able to explain and predict natural phenomena with such impressive accuracy On the other hand antirealists argue that the success of science does not warrant belief in the approximate truth of our best scientific theories This is because the history of science is a graveyard of theories that were once successful but were later discarded The author eventually settles on a middle ground position between scientific realism and antirealism called relative realism
