Nfpa Handbook 20th Edition:

Fire Fighting Pumping Systems at Industrial Facilities Dennis P. Nolan, 2011-06-10 Written from the perspective of industrial users this is the only book that describes how to install an effective firewater pumping system in a pragmatic and budget conscious way rather than with purely the regulatory framework in mind Based on the wide ranging industrial experience of the author this book is also the only one that deals with the particular risks and requirements of off shore facilities This book takes the reader beyond the prescriptive requirements of the fire code NFPA UL and considers how to make the best choice of design for the budget available as well as how to ensure the other components of the pumping system and supporting services are optimized The only alternative to guides written by regulatory enforcement bodies this book is uniquely practical and objective demonstrating how and why the standards need to be met Covers a wide range of industries including those with exceptional requirements such as off shore petroleum facilities and chemical plants Written by someone who has been responsible for the safety of large numbers of workers and billions of dollars worth of equipment for those in similarly responsible positions

Evaluation of Fire Flow Methodologies Matthew E. Benfer, Joseph L. Scheffey, 2015-08-08 This SpringerBrief offers careful assessments of the appropriateness and effectiveness of currently available methodologies for fire flow It explains the water supply requirements for firefighting including rate of flow the residual pressure required at that flow and the duration that is necessary to control a major fire in a specific structure First reviewing existing fire flow calculation methodologies in the U S and globally the authors determine the new information necessary to validate the existing fire flow calculation methodologies After identifying 19 methods from the U S UK France Germany the Netherlands New England and Canada two types of methods are evaluated those for building planning based on fire and building code requirements and those for on scene fire service use Building planning methods are also examined including an explanation of the range of building variables that determine fire flow A survey form for fire departments is provided to help fire departments identify key predictive features based on construction and building parameters Researchers and professionals in fire engineering will find the recommendations in *Evaluation of Fire Flow Methodologies* valuable
