High Performance Computing in Science and Engineering '20 Wolfgang E. Nagel, Dietmar H. Kröner, Michael M. Resch, 2022-01-01 This book presents the state of the art in supercomputer simulation. It includes the latest findings from leading researchers using systems from the High Performance Computing Center Stuttgart HLRS in 2020. The reports cover all fields of computational science and engineering ranging from CFD to computational physics and from chemistry to computer science with a special emphasis on industrially relevant applications. Presenting findings of one of Europe's leading systems, this volume covers a wide variety of applications that deliver a high level of sustained performance. The book covers the main methods in high performance computing. Its outstanding results in achieving the best performance for production codes are of particular interest for both scientists and engineers. The book comes with a wealth of color illustrations and tables of results.

*Simulation Tools and Methods for Supercritical Carbon Dioxide Radial Inflow Turbine* Jianhui Qi, 2023-01-01 To protect the Earth, China has launched its target of peaking carbon dioxide emissions by 2030 and achieving carbon neutrality by 2060, which greatly encourages the use and development of renewable energy. Supercritical CO<sub>2</sub> power cycle is a promising technology and the radial inflow turbine is the most important component of it, whose design and optimisation are considered as great challenges. This book introduces simulation tools and methods for supercritical CO<sub>2</sub> radial inflow turbine, including a high fidelity quasi one-dimensional design procedure, a non-ideal compressible fluid dynamics Riemann solver within open source CFD software OpenFOAM framework and a multi-objective Nelder-Mead geometry optimiser. Enhanced one-dimensional loss models are presented for providing a new insight towards the preliminary design of the supercritical CO<sub>2</sub> radial inflow turbine. Since the flow phenomena within the blade channels are complex, involving fluid flow, shock wave transmission and boundary layer separation, only employing the ideal gas model is inadequate to predict the performance of the turbine. Thus, a non-ideal compressible fluid dynamics Riemann solver based on OpenFOAM library is developed. This book addresses the issues related to the turbine design and blade optimization and provides leading techniques. Hence, this book is of great value for the readers working on the supercritical CO<sub>2</sub> radial inflow turbine and understanding the knowledge of CFD and turbomachinery.

*Asphalt Pavements* Y. Richard Kim, 2014-11-06 Asphalt Pavements contains the proceedings of the International Conference on Asphalt Pavements, Raleigh, North Carolina, USA, 15 June 2014, and discusses recent advances in theory and practice in asphalt materials and pavements.
