Johnson, 1986 **The Puzzle of Inheritance**, 1997 Rare Diseases Research and Diagnosis in Low- and Middle-Income Countries Claudia Gonzaga-Jauregui, Vajira Dissanayake, Ferran Casals, Aradhana Dwivedi, Kawmadi Gunawardena, 2025-09-23 Rare diseases RDs encompass more than 7000 described disorders characterized by a low prevalence in the general population Collectively these disorders affect between 6 to 8% of the world population that is approximately 300-350 million people worldwide The majority of RDs involve an underlying genetic component and more than 6000 conditions have been linked to a known molecular cause In the last 13 years the adoption of human genomic sequencing has enabled the more efficient and accurate diagnosis and research of rare genetic disorders Genomic sequencing has become a first tier diagnostic test for many patients with congenital syndromes and suspected genetic disorders in high income countries as well as an effective method for the study of undiagnosed and novel genetic disorders in the research arena The implementation of genomic sequencing has dramatically changed the diagnosis and research of rare diseases in high income countries In contrast the reality in low and middle income countries LMICs is strikingly different where disparities on accessibility to these technologies exist The high cost of genomic sequencing and other molecular technologies remains a limiting factor in the common implementation of these methods for diagnosis and research of rare diseases in resource limited settings The study of rare genetic diseases in LMICs may be underestimated when compared to large scale genomic studies performed in developed countries despite being performed under much strained circumstances Consequently research publications on the genetics of RDs within LMICs might be underrepresented in the literature limiting

the understanding of genetic and phenotypic variability across populations and contributing to the lack of representation of non European individuals in genetic studies This Research Topic aims to provide an opportunity for researchers and clinicians from LMICs who are dedicated to the study of rare genetic disorders to share their findings with the global genetics scientific community as well as their challenges and perspectives on the implementation of modern technologies and approaches for the diagnosis and study of rare genetic disorders
