## **Openai In The Us:**

*Deploying Artificial Intelligence to Achieve the UN Sustainable Development Goals* Arthur Guseni Oliver Mutambara, 2025-07-01 This book provides research insights into how Artificial Intelligence AI can be used to achieve the UN's Sustainable Development Goals (SDGs) 17 interconnected goals designed to address the world's most pressing challenges by 2030. It reviews the SDGs and discusses why progress has been mixed and uneven across different countries, regions, and goals. The book posits that attaining the SDGs will depend on enhanced global cooperation, increased funding, improved infrastructure, public-private partnerships, regional/continental integration, addressing the climate crisis, inclusive economic transformation, and visionary leadership. More specifically, the publication advocates leveraging innovative and transformative technologies, particularly the deployment of AI. The research acknowledges the risks of digital imperialism, data colonialism, and technological exclusion, especially in emerging and least industrialised economies. Hence, in deploying AI to achieve the SDGs, the book puts a premium on decoloniality in AI systems and democratising AI technology. Provides a critique of the current SDGs approach by reframing the goals as a comprehensive risk assessment of humanity's most pressing threats in the 21st century. Features broad and holistic interventions to accelerate the attainment of the SDGs. Provides a comprehensive but accessible introduction to AI concepts and advanced innovations such as AlphaFold, ChatGPT 4, DeepSeek R1, Grok 3, and autonomous vehicles, drones, and driverless cars. Discusses the AI strategies of leading economies and assesses the impact of AI on geopolitics. Provides a comprehensive critique of global AI efforts by the UN and African Union while proffering alternative paradigms and frameworks. Presents the enablers, drivers, and strategic framework of AI deployment to achieve the SDGs. Develops and presents details of six distinct but related components of a novel Strategic Framework for developing and adopting AI: Vision, Strategy, Policy, Governance, Legislation, Regulations, and Implementation Matrix. Outlines specific ways that AI can be deployed to achieve each of the 17 SDGs and reviews seven countries' experiences. Explores an innovative, forward-looking, and technology-driven framework for equitable global socio-economic transformation to succeed the SDGs post 2030.

Artificial Intelligence Arthur G.O. Mutambara, 2025-04-09 This book presents contextualised and detailed research on Artificial Intelligence (AI) and the Global South. It examines the key challenges of these emerging and least industrialised countries while proffering holistic and comprehensive solutions. The book then explains how AI, as part of these broad interventions, can drive Global South economies to achieve inclusive development and shared prosperity. The book outlines how countries can swiftly prepare to adopt and develop AI across all sectors. It presents novel national, regional, and continental AI adoption, development, and implementation frameworks. Features Broad non-AI interventions and prescriptions to address Global South challenges. A comprehensive but accessible introduction to AI concepts, technology, infrastructure, systems, and innovations such as AlphaFold, ChatGPT 4, and DeepSeek R1. An overview of AI-related technologies such as quantum computing, battery energy storage systems, 3D printing, nanotechnology, IoT, and blockchain.

How to prepare emerging economies to unlock the benefits of AI while mitigating the risks Discussion of specific AI applications in 11 critical Global South sectors Details of 11 sector case studies of AI adoption in the Global South and Global North Ten country case studies Sharing emergent AI experiences in the Global South AI adoption framework vision strategy policy governance legislation regulation and implementation matrix A framework for democratising and decolonising AI The value proposition for AI research development and ownership in the Global South A case for the participation of the Global South in the AI semiconductor industry This book is aimed at policymakers business leaders graduate students academics researchers strategic thinkers and world leaders seeking to understand and leverage the transformative role of AI based systems in achieving inclusive development economic transformation and shared prosperity

**Proceedings of the International Conference on Law and Technology (ICLT 2025)** Tabrez Ahmad,Rashmi Kunebelakere Siddappa,Azimkhan B. Pathan,Farhana Helal Mehtab,Upankar Chutia,2026-01-25 This open access book presents the select proceedings of the International Conference on Law and Technology ICLT 2025 *A Research Agenda*

*for EU Copyright Law* Enrico Bonadio, Caterina Sganga, 2025-03-12 This Research Agenda provides fresh insights into fundamental issues within EU copyright law. Expert authors highlight recent trends in the scholarship and discuss the challenges posed by novel technologies such as AI and NFTs. They expand on the need to update the law to adapt to change and present innovative analyses of various strategies to influence EU copyright policies. *Artificial Intelligence Law* Edward Swan, 2024-03-18 It is inevitable given the enormous media driven concern generated by the recent application of artificial intelligence AI to an ever expanding spectrum of day to day human experience that the need for a clearly articulated legal response has become imperative. This book both clarifies the controversial issues surrounding the use of AI and explores in great detail how far from being unregulated the creation, distribution and operation of AI systems currently is and will remain subject to a vast array of existing laws and regulations all over the world. Demonstrating beyond any doubt that the traditional concepts of legal responsibility including duty of care, negligence and compensation for damages will always be applicable to those humans who create and or use artificially intelligent things or systems, the author shows how AI systems are clearly implicated in numerous existing legal regimes including the following relevant provisions under international law and EU law: applicable provisions in the laws of the United States, the United Kingdom, France, China, India, Japan, South Korea and Singapore; and numerous national provisions in the legal fields of health and safety, intellectual property, competition, privacy and data protection and military engagement. However, given the lack of international consensus on this vitally important issue, the author suggests that any worldwide agreement on the legal responsibilities relating to the use of AI will need to be carefully defined and that provisions will need to be reviewed to determine how they will apply to any new range of artificially intelligent creations. The purpose of this book is to review those legal concepts throughout the world that currently govern the application of AI and to comment on modifications or extensions of the rule of law that are being proposed as necessary to serve and protect humanity in relation to the expanding applications of AI. It is important that anyone who uses or is affected by AI products understands the relationship between existing laws and regulations in major markets around the world and those areas where initial regulations may be required. For them, for their counsel and for the various policy and regulatory authorities confronted with AI issues, this book will prove an essential guide. *Introduction to Generative AI, Second Edition* Numa Dhamani, 2026-01-13 Get up to speed quickly with generative AI. AI tools like ChatGPT and Gemini, automated coding tools like Cursor and Copilot, and countless LLM powered agents have become a part of daily life. **Leadership 2.0 in processes of a sustainable change** Prof. Dr. Michael Kurwan,2025-06-30 Document from the year 2025 in the subject Leadership and Human Resources Leadership language English abstract In order to successfully implement sustainable changes in a company in the context of change processes strong leadership is required at the top of a company which should have a great deal of empathy and a sure instinct in order to position the company in the market in the long term and profitably In order to successfully shape these sustainable changes it will not be the famous power of the leader of the past but will only work with the involvement of employees in the new world of work in the knowledge age which is characterized by digitalization and artificial intelligence This new form of leadership is also referred to as Leadership 2 0 in which it is important to retain top performers and in particular key personnel in the company in the long term which is a very challenging leadership task in HR management In change processes a fundamental distinction must be made between incremental change management and radical change management While incremental change takes place continuously and is integrated into everyday working life radical change represents a strategic realignment of the company which is largely associated with staff reductions and is intended to change the corporate culture This is particularly true in the case of restructuring where cost cutting programs play a decisive role in ensuring the long term survival of the company Employees are more willing to go along with incremental change also known as continuous improvement than radical change as they could also be affected by staff cuts This fuels employees fears and therefore often leads to high staff turnover
