Automatic extraction and processing of document

references Kathrin Eichler,2010-10-13 Master s Thesis from the year 2007 in the subject Computer Science Applied grade 1
0 University of Sunderland School of Computing and Technology language English abstract While reading documents you
often encounter text passages advising you to refer to other documents for more information about a specific topic These
references to other documents are particularly common in technical documents written for the sole purpose of providing the
reader with as much relevant information as possible without rephrasing information that can be found elsewhere Knowing
how the documents in a system are interrelated i e which other documents a document refers to or is referred by can be
extremely helpful when trying to get access to relevant information A typical example of such a knowledge net providing
information about document relations is CiteSeer a digital library of academic literature For each document in the library
system CiteSeer displays lists of related documents such as a list of documents that the current document cites as well as a
list of documents that the current document is cited by The assumption that inspired this thesis is that such lists are not only
helpful when reading academic literature but could also assist a reader of technical documents stored in a company s
document management system The idea was thus to extend an existing document management system by displaying for each
document stored in the system a list of links to documents that the current document refers to As information about how the
documents in this system are interrelated was not available the focus of the project underlying this thesis was on the first
step towards solving this task automatically analyzing documents in order to extract names of related documents Once all
document names mentioned in a document have been extracted the next step would then be to search for these documents in
the system s database and in case they have been successfully found create links to the respective documents The outcome of
the project was a system that performs the extraction task It is based on Conditional Random Fields a machine learning
technique introduced by Lafferty et al 2001 and is able to extract document names from unseen documents achieving high
precision scores 88% and acceptable recall scores 65% on a test dataset The implementation is based on a Java package
provided by Sarawagi Cohen 2005 which was adapted and extended to suit the nature of the task As the approach is based
on supervised learning the project also involved the generation of appropriate training data *Proceedings - Project

Kourosh Ardestani,2003-08-29 The authors base the books sample intranet on Microsofts free best practices example the
IBuySpy Portal and teach you to quickly create an application that exploits the advanced features of ASP NET A full
explanation of the IBuySpy Portal architecture is provided which allows you to maximize product usage Further the authors
explore customizing existing portal modules and even build some of their own In the course of reading you will acquire a

Management Bob Wiggins, 2016-04-29 *Effective Document and Data Management* illustrates the operational and strategic significance of how documents and data are captured, managed, and utilized. Without a coherent and consistent approach, the efficiency and effectiveness of the organization may be undermined by less than optimal management and use of its information. The third edition of the book is restructured to take this broader view and to establish an organizational context in which information is managed. Along the way, Bob Wiggins clarifies the distinction between information management, data management, and knowledge management, helps make sense of the concept of an information life cycle, to present and describe the processes and techniques of information and data management, storage, and retrieval, uses worked examples to illustrate the coordinated application of data and process analysis, and provides guidance on the application of appropriate project management techniques for document and records management projects. The book will benefit a range of organizations and people, from those senior managers who need to develop coherent and consistent business and IT strategies, to information professionals such as records managers and librarians who will gain an appreciation of the impact of the technology, and of how their particular areas of expertise can best be applied, to system designers, developers, and implementers, and finally to users. The author can be contacted at curabyte@gmail.com for further information.

Construction Operations Manual of Policies and Procedures Andrew Civitello, Sidney Levy, 2007-10-09 Smooth the managerial side of running a small to mid-sized contracting firm with this paperwork-slashing, time-saving, business-boosting reference. Readers will find methods, strategies, and tactics, forms, checklists, and ready-to-copy letters laid out in a concise, easy-to-follow format. The new fourth edition offers 20% more forms and checklists, covers the latest developments in construction management software, along with new material on the Design-Build process. The CD-ROM contains project delivery forms, sample letters, checklists, and more.
