**Applied Geotechnics for Construction Projects, Volume 3** Ammar Dhouib, 2023-02-07 Geotechnical engineering is now a fundamental component of construction projects. The third volume of this book is its backbone, dedicated to foundations for civil and industrial construction projects. Applied Geotechnics for Construction Projects 3 first presents the basic theoretical principles and rules governing the designing and validation of foundations, shallow, semi-deep, and deep, then presents real foundation projects with a detailed comparison of the approaches and methods of calculating foundations in relation to the reference systems and rules in force, closely compared to and validated by the Eurocodes. The third chapter presents examples of foundation projects covering high side building rafts, strip footings, piles, and embankments, enriched by an unprecedented level of experience in the field of foundations for civil and industrial construction projects. It ends with examples of damage to foundations and practical appendices. Each chapter of this third volume is illustrated with photographs and measurements of construction sites and is built on both theory and experience in the field of foundations as a whole. The result is a combination of geotechnical expertise and lessons learned from experience, both of which are highly valuable in the field of applied geotechnics for construction projects. [Applied Geotechnics for Construction Projects, Volume 4](#) Ammar Dhouib, 2022-12-19 Geotechnical engineering is now a fundamental component of construction projects. The fourth and final volume of this book presents a range of retaining structures alongside soil reinforcement and improvement techniques and processes. Applied Geotechnics for Construction Projects 4 first presents the concept of thrust fall, then goes on to examine the behavior of retaining structures and their design and justification methods. A variety of practical applications for retaining structures are then considered, covering gravity walls, sheet pile curtains, in advance shoring, excavations, and retaining diaphragm walls. The book goes on to study soil reinforcement and improvement techniques, a subject that the author has dedicated thirty-five years to researching and teaching from reinforced earth, in situ soil nailing, micropiles, in situ soil compaction, stone columns, and rigid inclusions to soil cement and lime cement columns. This book ends with a comprehensive and practical discussion of the behavior of underground structures, covering the concepts of convergence, confinement, stress evolution, and subsidence estimation. Each chapter of this fourth volume is illustrated with concrete examples and measurements of retaining structures, soil reinforcement, and soil improvement from construction sites. The result is a combination of geotechnical expertise and lessons learned from experience, both of which are highly valuable in the field of applied geotechnics for construction projects. **Applied Geotechnics for Construction Projects, Volume 2** Ammar Dhouib, 2022-12-21 Geotechnical engineering is now a fundamental component of construction projects. The second volume of this book addresses the fundamental principles of soil mechanics and the role of water in geotechnical projects and assessments. Applied Geotechnics for Construction Projects 2 outlines the hydraulic properties of soils and the basic concepts of water in soil, detailing the principles of permeability measurement tests and giving concrete test cases and

then goes on to outline the basic notions of soil mechanics as applied in geotechnics from consolidation to short and long term notions via the swelling phenomena of clayey soils soil shear strength and slope stability The third chapter presents a comprehensive overview of geotechnical expertise using examples of concrete projects either with or without damage in the context of geotechnical construction works Each chapter of this second volume provides concrete examples of applications to real projects and the rules and lessons we must remember The result is a combination of geotechnical expertise and lessons learned from experience both of which are highly valuable in the field of applied geotechnics for construction projects
