Power System Simulation Using Semi-Analytical Methods Kai Sun,2023-09-26 POWER SYSTEM SIMULATION USING SEMI ANALYTICAL METHODS Robust coverage of semi analytical and traditional numerical methods for power system simulation In *Power System Simulation Using Semi Analytical Methods* distinguished researcher Dr Kai Sun delivers a comprehensive treatment of semi analytical simulation and current semi analytical methods for power systems The book presents semi analytical solutions on power system dynamics via mathematical tools and covers parallel contingency analysis and simulations The book offers an overview of power system simulation and contingency analysis supported by data tables illustrations and case studies on realistic power systems and experiments Readers will find open source code in MATLAB along with examples for key algorithms introduced in the book You ll also find A thorough background on power system simulation including models numerical solution methods and semi analytical solution methods Comprehensive explorations of semi analytical power system simulation via a variety of mathematical methods such as the Adomian decomposition differential transformation homotopy analysis and holomorphic embedding methods Practical discussions of semi analytical simulations for realistic large scale power grids Fulsome treatments of parallel power system simulation Perfect for power engineers and applied mathematicians with an interest in high performance simulation of power systems and other large scale network systems *Power System Simulation Using Semi Analytical Methods* will also benefit researchers and postgraduate students studying power system engineering

Nonlinear Ordinary Differential Equations Martin Hermann,Masoud Saravi,2016-05-09 The book discusses the solutions to nonlinear ordinary differential equations ODEs using analytical and numerical approximation methods Recently analytical approximation methods have been largely used in solving linear and nonlinear lower order ODEs It also discusses using these methods to solve some strong nonlinear ODEs There are two chapters devoted to solving nonlinear ODEs using numerical methods as in practice high dimensional systems of nonlinear ODEs that cannot be solved by analytical approximate methods are common Moreover it studies analytical and numerical techniques for the treatment of parameter depending ODEs The book explains various methods for solving nonlinear oscillator and structural system problems including the energy balance method harmonic balance method amplitude frequency formulation variational iteration method homotopy perturbation method iteration perturbation method homotopy analysis method simple and multiple shooting method and the nonlinear stabilized march method This book comprehensively investigates various new analytical and numerical approximation techniques that are used in solving nonlinear oscillator and structural system problems Students often rely on the finite element method to such an extent that on graduation they have little or no knowledge of alternative methods of solving problems To rectify this the book introduces several new approximation techniques

Boyd,2014-09-23

Transcendental equations arise in every branch of science and engineering While most of these equations are easy to solve some are not and that is where this book serves as the mathematical equivalent of a skydiver's reserve parachute not always needed but indispensable when it is The author's goal is to teach the art of finding the root of a single algebraic equation or a pair of such equations **Proceedings of the Seventh SIAM Conference on Parallel Processing for Scientific**

Computing David H. Bailey,1995-01-01 Proceedings Parallel Computing Transportation Systems 1997 (TS'97) Markos Papageorgiou,A. D. Pouliezios,1997 This Symposium was the 8th in the series of planned IFAC Symposia on Transportation Systems The International Program Committee received over 400 papers from the international transportation community Road Traffic was the most popular subject with over 190 abstracts followed by Intermodal and Freight Public Transport Rail and Maritime Transport and Air Traffic Transportation of people and goods has been necessary for society for thousands of years In modern times transportation by road rail air and sea has become a fundamental component of human activity A great number of technical economic environmental and organizational problems related to traffic and transportation have been ingeniously resolved in the past and perhaps an even higher number of problems will have to be overcome in the future Recently it has been realized more and more that problems connected to transportation traffic congestion and delay cannot be resolved by simply extending the available infrastructure Efficient use of existing facilities is a feasible alternative which becomes possible by the application of concepts and methods provided by systems and information theory Besides recent developments in digital computer and communication technology provide the necessary practical tools for satisfactory and cheap solutions The papers in this volume reflect these ideas and the current diversity and dynamism of the field as a whole

has emerged as a central issue here and industrial users require the development of modelling languages for both analyses and design as well as generic models and tools which can be used for system identification optimisation and fault diagnostics Linear lumped parameter systems of general complexity are currently well addressed by a range of commercially available packages However there is a dearth of tools suitable for the analysis and synthesis of large scale distributed non linear hybrid and stochastic systems which are increasingly a feature in modern manufacturing and process engineering As the scale of the problems to be addressed increases there is a need for numerically robust and efficient computational procedures linked to powerful interactive graphical interfaces which maximise the user of limited human resources and of course standardised data bases which can be used with wide range of analysis and design procedures Topics covered included the now traditional domains of algorithm architectures and tools and there was a very welcome emphasis on applications where no less than four sessions were devoted to this important aspect
