Innovate to Dominate Tai Ming Cheung,2022-08-15 In *Innovate to Dominate* Tai Ming Cheung offers insight into why how and whether China will overtake the United States to become the world's preeminent technological and security power. This examination of the means and ends of China's quest for techno security supremacy is required reading for anyone looking for clues as to the long term direction of the global order. The techno security domain Cheung argues is where national security innovation and economic development converge and it has become the center of power and prosperity in the twenty first century. China's paramount leader Xi Jinping recognizes that effectively harnessing the complex interactions among security innovation and development is essential in enabling China to compete for global dominance. Cheung offers a richly detailed account of how China is building a potent techno security state. In *Innovate to Dominate* he takes readers from the strategic vision guiding this transformation to the nuts and bolts of policy implementation. The state led top down mobilizational model that China is pursuing has been a winning formula so far but the sternest test is ahead as China begins to compete head to head with the United States and aims to surpass its archrival by mid century if not sooner. *Innovate to Dominate* is a timely and analytically rigorous examination of the key strategies guiding China's transformation of its capabilities in the national technological military and security spheres and how this is taking place. Cheung authoritatively addresses the burning questions being asked in capitals around the world. Can China become the dominant global techno security power? And if so when? Resch,2026-02-24 This book presents the state of the art in supercomputer simulation. It includes the latest findings from leading researchers using one of Europe's top systems at the High Performance Computing Center Stuttgart HLRS in 2023. A wide variety of topics are discussed from all fields of computational science and engineering ranging from CFD to computational physics and from chemistry to computer science with a special emphasis on industrially relevant applications that deliver a high level of sustained performance. Covering the main methods in high performance computing and featuring a wealth of color illustrations and tables of results the book will be of particular interest to scientists and engineers who seek to achieve the best performance for production codes. **Women in Bee Science** Vera Lucia Imperatriz-Fonseca,Helen

Wallace,Susan E. Fahrbach ,Patrícia Nunes-Silva,2026-03-04 We are delighted to present the inaugural *Frontiers in Bee Science Women* in series of article collections. At present less than 30% of researchers worldwide are women. Long standing biases and gender stereotypes are discouraging girls and women away from science related fields and STEM research in particular. Science and gender equality are however essential to ensure sustainable development as highlighted by UNESCO. In order to change traditional mindsets gender equality must be promoted stereotypes defeated and girls and women should be encouraged to pursue STEM careers. Therefore *Frontiers in Bee Science* is proud to offer this platform to promote the work of women scientists across all fields of Bee Science. The work presented here highlights the diversity of research

performed across the entire breadth of Bee Science research and presents advances in theory experiment and methodology with applications to compelling problems Please note to be considered for this collection the first or last author should be a researcher who identifies as a woman
