From Heat to Thermal Science Gary D. Patterson,2025-09-26 This book explores the human understanding of heat from early cultural perceptions to the scientific developments that shaped thermal science Beginning with historical musings on heat it traces the evolution of scientific thought from 16th century Italy to the quantum understanding of heat in the 20th century The book examines how humans have perceived measured and produced heat leading to a unified concept that has remained constant heat flows from a hot body to a cold body It serves as an excellent resource for chemists and anyone interested in the history of chemistry and science *Electromagnetic Theory of Gratings* R. Petit,2013-03-12 When I was a student in the early fifties the properties of gratings were generally explained according to the scalar theory of optics The grating formula which predicts the diffraction angles for a given angle of incidence was established experimentally verified and intensively used as a source for textbook problems Indeed those grating properties we can call optical properties were taught in a satisfactory manner and the students were able to clearly understand the diffraction and dispersion of light by gratings On the other hand little was said about the energy properties i.e about the prediction of efficiencies Of course the existence of the blaze effect was pointed out but very frequently nothing else was taught about the efficiency curves At most

a good student had to know that for an eche lette grating the efficiency in a given order can approach unity insofar as the diffracted wave vector can be deduced from the incident one by a specular reflexion on the large facet Actually this rule of thumb was generally sufficient to make good use of the optical gratings available about thirty years ago Thanks to the spectacular improvements in grating manufacture after the end of the second world war it became possible to obtain very good gratings with more and more lines per mm Nowadays in gratings used in the visible region a spacing smaller than half a micron is common
