industrial and municipal applications covering all of the processes and equipment necessary to design operate and  
troubleshoot desalination systems This is becoming increasingly more important for not only our world s industries but our  
world s populations as pure water becomes more and more scarce Blue is the new green This is an all new revised edition of  
a modern classic on one of the most important subjects in engineering Water Featuring a total revision of the initial volume  
this is the most comprehensive and up to date coverage of the process of desalination in industrial and municipal applications  
a technology that is becoming increasingly more important as more and more companies choose to go green This book covers  
all of the processes and equipment necessary to design operate and troubleshoot desalination systems from the fundamental  
principles of desalination technology and membranes to the much more advanced engineering principles necessary for  
designing a desalination system Earlier chapters cover the basic principles the economics of desalination basic terms and  
definitions and essential equipment The book then goes into the thermal processes involved in desalination such as various  
methods of evaporation distillation recompression and multistage flash Following that is an exhaustive discussion of the  
membrane processes involved in desalination such as reverse osmosis forward osmosis and electrodialysis Finally the book  
concludes with a chapter on the future of these technologies and their place in industry and how they can be of use to society  
This book is a must have for anyone working in water for engineers technicians scientists working in research and  
development and operators It is also useful as a textbook for graduate classes studying industrial water applications
