

Here is a little background information to help see if you can find the cause of this failure:
This was a Cummins ISX engine in a Freightliner truck. Engine had over 900,000 miles on it, and the history of previous repairs or rebuilds is unknown. Engine was in-frame overhauled and ran less than 40 miles before the #3 piston and connecting rod destroyed the cylinder block. There are no ECM records of low engine oil pressure or high engine temperatures.
