High-dimensional Nonlinear Diffusion Stochastic Processes Yevgeny Mamontov, Magnus Willander, 2001-01-19 This book is the first one devoted to high dimensional or large scale diffusion stochastic processes DSPs with nonlinear coefficients. These processes are closely associated with nonlinear Ito s stochastic ordinary differential equations ISODEs and with the space discretized versions of nonlinear Ito s stochastic partial integro differential equations. The latter models include Ito s stochastic partial differential equations ISPDEs. The book presents the new analytical treatment which can serve as the basis of a combined analytical numerical approach to greater computational efficiency in engineering problems. A few examples discussed in the book include the high dimensional DSPs described with the ISODE systems for semiconductor circuits the nonrandom model for stochastic resonance and other noise induced phenomena in high dimensional DSPs the modification of the well known stochastic adaptive interpolation method by means of bases of function spaces ISPDEs as the tool to consistently model non Markov phenomena the ISPDE system for semiconductor devices the corresponding classification of charge transport in macroscale mesoscale and microscale semiconductor regions based on the wave diffusion equation the fully time domain nonlinear friction aware analytical model for the velocity covariance of particle of uniform fluid simple or dispersed the specific time domain analytics for the long non exponential tails of the velocity in case of the hard sphere fluid. These examples demonstrate not only the capabilities of the developed techniques but also emphasize the usefulness of the complex system related approaches to solve some problems which have not been solved with the traditional statistical physics methods yet. From this veiwpoint the book can be regarded as a kind of complement to such books as Introduction to the Physics of Complex Systems The Mesoscopic Approach to Fluctuations Nonlinearity and Self Organization by Serra Andretta Compiani and Zanarini Stochastic Dynamical Systems Concepts Numerical Methods Data Analysis and Statistical Physics An Advanced Approach with Applications by Honerkamp which deal with physics of complex systems some of the corresponding analysis methods and an innovative stochastics based vision of theoretical physics. To facilitate the reading by nonmathematicians the introductory chapter outlines the basic notions and results of theory of Markov and diffusion stochastic processes without involving the measure theoretical approach. This presentation is based on probability densities commonly used in engineering and applied sciences.
