*Modeling And Simulation Of Distributed Systems (With Cd-rom)* Alexander Kostin,Ljudmila Ilushechkina,2010-06-28 CD ROM with a simulation system and numerous solved models is attached to the book Distributed systems are a continuously expanding area of computer science and computer engineering This book addresses the need for literature on modeling and simulation techniques for distributed systems For simulation modeling of distributed systems in the book a specific class of extended Petri nets is used that allows to easily represent the fundamental processes of any distributed system The book is intended first of all as a text for related graduate level university courses on distributed systems in computer science and computer engineering Other computer science and computer engineering courses would also find the book useful as a source of practical information for a broad community of those graduate students who are busy with simulation in their study and research The book can be useful also to academics who give related graduate courses or deliver research oriented modules for graduate students Further the book can be helpful to system architects and developers who apply modeling and simulation techniques as a step in the design and implementation of their systems Containing a large number of models with commented source texts and simulation results on the attached CD ROM it can also serve as valuable reference book for researchers who want to develop their own models in terms of Petri nets

**Time and Probability in Formal Design of Distributed Systems** Hans A. Hansson,1994 Due to the current economic climate many if not all industries depend upon computer systems for their product design and manufacturing processes and for routine business functions Although the use of such systems brings many advantages the consequences of failure including physical failure of computer systems software design faults and human error can involve both loss of life and environmental damage safeguards and subsequent accountability Research funds are accordingly being generated by governments and leading industries affording the development of safety critical systems by multi disciplinary teams of mechanical structural electronic and software engineers and where appropriate psychologists sociologists and economists A new book series Real Time Safety Critical Systems has been launched as a forum to enable all relevant researchers and developers from industry and academia world wide to report their findings in the field This publication is the first in the series and concentrates on presenting a framework for specification and analysis of real time and reliability in distributed systems The framework consists of a language for modelling the behaviour of distributed systems a logic for formulating system properties and an algorithm for

verifying that descriptions in the language satisfy formulas expressed in the logic is also accessible to readers with only a basic knowledge of formal modelling Indeed as Willem Paul de Roever says in his introduction to the publication it constitutes an indispensable link in the education of our next generation of researchers and gives a clear and scientifically responsible description how real time and probability can be added to process algebra how to extend Emerson and Clarke s branching time temporal logic to these new features and how to verify the properties thus expressed by an appropriate tool
