A solution can be prepared only by combining the solute and solvent. It is a mixture of two substances. The concentration of a solution can be expressed in terms of its mass. It has been expressed with correct number of figures of figures. The following are possible:

1. Mass of solute (g) / Mass of solution (g) x 100
 2. Mass of solute (g) / Volume of solution (ml) x 100
 3. Volume of solute (ml) / Volume of solution (ml) x 100

1. Solution having a pH of 7 will be a neutral solution. Solution with pH value above 7 are basic in nature and solution with pH value below 7 are acidic.

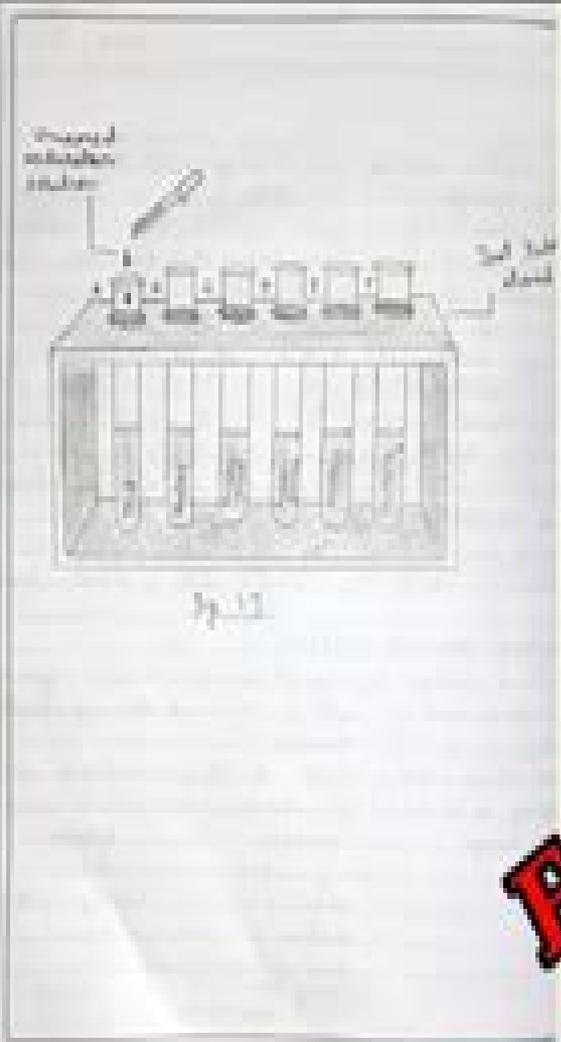

2. pH of a solution can be determined using a pH scale or using an indicator with universal indicator.

3. Universal Indicator Solution

It is a mixture of several indicators having different pH ranges and it used to determine the approximate value of pH of a solution.

Teaching Chemistry Around the World Björn Risch, 2010 As teachers we often tend to expect other countries to teach chemistry in much the same way as we do but educational systems differ widely At Bielefeld University we started a project to analyse the approach to chemical education in different countries from all over the world Teaching Chemistry around the World 25 countries have participated in the project The resulting country studies are presented in this book This book may be seen as a contribution to make the structure of chemistry teaching in numerous countries more transparent and to facilitate communication between these countries Especially in the case of the school subject chemistry which is very unpopular on the one hand and occupies an exceptional position on the other hand due to its relevance to jobs and everyday life and most notably due to its importance for innovation capacity and problem solving we have to learn from each others educational systems
