Doctoral Thesis Dissertation from the year 1999 in the subject Geography Earth Science Cartography Geographic Information Science and Geodesy grade 1 0 University of Copenhagen Geophysical Department language English abstract

The primary objectives of this thesis are 1 to find and theoretically discuss the relevant statistical distributions for backscatter coefficients intensities in SAR images 2 to develop and examine methods which can be applied for a statistical analysis of intensities in SAR images over homogeneous open sea areas an analysis which hopefully can be used to detect departures from homogeneity 3 to use these methods for an examination of the statistical behaviour of the intensities in SAR images Objective 2 is subdivided into two parts 2a development of parameter estimation methods for statistical distributions 2b examination of different types of statistical test methods It will be demonstrated that the three parameter generalized gamma distribution describes the statistical distribution of intensities in homogeneous sea areas as well as the K distribution and that the parameters in the generalized gamma distribution are easier and more robust to estimate than the parameters

in the K distribution Therefore the generalized gamma distribution is recommended to model a homogeneous sea surface for instance if the target is to detect ships or icebergs in a SAR image      **Technical note** ,1966      **Index to Statistics and Probability: Permuted titles.
