Fuzzy Systems and Soft Computing in Nuclear Engineering Da Ruan, 2013-11-21 Fuzzy systems and soft computing are new computing techniques that are tolerant to imprecision uncertainty and partial truths Applications of these techniques in nuclear engineering present a tremendous challenge due to its strict nuclear safety regulation The fields of nuclear engineering fuzzy systems and soft computing have nevertheless matured considerably during the last decade This book presents new application potentials for Fuzzy Systems and Soft Computing in Nuclear Engineering The root of this book can be traced back to the series of the first second and third international workshops on Fuzzy Logic and Intelligent Technologies in Nuclear Science FUNS which were successfully held in Mol September 14 16 1994 FLINS 94 in Mol September 25 27 1996 FLINS 96 and in Antwerp September 14 16 1998 FLINS 98 The conferences were organised by the Belgian Nuclear Research Centre SCKeCEN and aimed at bringing together scientists researchers and engineers from academia and industry at introducing the principles of fuzzy logic neural networks genetic algorithms and other soft computing methodologies to the field of nuclear engineering and at applying these techniques to complex problem solving within nuclear industry and related research fields This book as its title suggests consists of nuclear engineering applications of fuzzy systems Chapters 1 10 and soft computing Chapters 11 21 Nine pertinent chapters are based on the extended version of papers at FLINS 98 and the other 12 chapters are original contributions with up to date coverage of fuzzy and soft computing applications by leading researchers written exclusively for this book

Automation and Robotics in Construction XI Alan Chamberlain, 2012-12-02 Sourced from international experts this book presents papers dealing with a wide range of soft and hard research issues at various stages of development in the field Some cover entirely new ground whilst others reflect progress on the sometimes frustrating path to truly robust technology Of particular interest are contributions discussing issues of exploitation and commercialisation the integration of end products within the design and construction processes incorporating information technology IT and the impact of the emerging technology on the culture and organisation of the construction industry A mark of growing maturity is apparent in the coverage of health and safety and related social issues This is complemented by a clear commitment to the consideration of human factors and the environment It is hoped that by promoting a wider debate on the matters of future technology and its horizons on the

identification of what industry needs from the research and development community and on building effective partnerships between academia industry and government the publication not only addresses the practical commercial obligation to seek robust solutions for today s problems but will stimulate research for the years to come **Routine Test Fault Procedure, Manual Exchange Systems** Great Britain.
