*The Aspen Institute Guide to Socially Responsible MBA Programs: 2008-2009* The Aspen Institute, 2008-06-23 The Aspen Institute, a premier non-profit research organization for corporate social responsibility, offers the first comprehensive guide to the world's leading global MBA programs in CSR, an indispensable guide for prospective students, universities, hiring companies, and libraries. This guide provides an overview of how global MBA programs bring social impact management into their curricular and extracurricular programs. Social impact management, which includes environmental, ethical, and corporate governance issues, is the field of inquiry at the intersection of business needs and wider societal concerns that reflects their complex interdependency. Without an understanding of this interdependency, neither business nor the society in which it operates can thrive. Each year, business schools from around the world strive to differentiate themselves and attract the best and the brightest future business leaders, while prospective MBAs are looking for a program that will provide effective management skills to succeed in the changing face of business. The bottom line is no longer exclusively dedicated to financial returns. Rather, business leaders must also consider the environmental and social impacts of their decisions in order to compete in today's marketplace. The MBA schools that participate in the Aspen Institute's survey and are therefore highlighted in the Aspen Institute Guide for Socially Responsible MBA Programs 2008-2009 are leaders in integrating these issues into their MBA curricula.

*Visions of Applied Mathematics* Sergio Plata, 2007 This book explores the creation of knowledge in applied mathematics. It mainly analyses applications of mathematical theories in several contexts. The author analyses the generation of advanced theories that enable people to understand problems in a scientific way and proposes cognitive models dealing with the observation of human behaviour and its abstraction into comprehensible mathematical models, as this is a main problem in our modern world. This work is directed at people concerned with understanding cognitive processes when tackling complex problems, as it shows the building of knowledge in the making of scientific approaches to any discipline. Using a cross-disciplinary approach, he focuses on the key issues of theories and technologies applicable in a wide variety of contexts, for example in

military organizations in research and development departments and in general strategic planning as shown in applied cases in Latin America     Register Indiana University, 1981     **California.
