Theory in the "Post" Era Christian Moraru, Andrei Terian, Alexandru Matei, 2021-08-26 Shortlisted for the AATSEEL 2022 Award for Best Edited Multi Author Scholarly Volume AATSEEL is The American Association of Teachers of Slavic and East European Languages *Theory in the Post Era* brings together the work and perspectives of a group of Romanian theorists who discuss the morphings of contemporary theory in what the editors call the post era Since the Cold War s end and especially in the third millennium theorists have been exploring the aftermath and sometimes just the after of whole paradigms the crisis or passing of anthropocentrism the twilight of an entire ontological and cultural condition as well as the corresponding rise of an antagonist model of an anti meta or neo alternative with examples ranging from posthumanism and post postmodernism to post aesthetics postanalog interpretation or digicriticism post presentism post memory post or neo critique and so forth It is no coincidence the contributors to this volume argue that this post moment is also a time when theory is practiced as a world genre If theory has always been a worlded enterprise a quintessentially communal cross cultural and international project this is truer at present than ever Perhaps more than other humanist constituencies today s theorists work and belong in a theory commons that is transnational if still uneven economically politically and otherwise *Theory in the Post Era* reports the results of Romanian theory experiments that join efforts made in other places to foster a theory for the post age

Economic Resilience During Overlapped Crises Emil Dinga, 2025-02-27 This book provides an analytical framework for understanding economic crisis and the mechanisms that underpin them It shows the various ways in which economies can face crisis and the unique impacts that occur when multiple crises happen at the same time highlighting how crises are not isolated but part of a wider system of crises By examining the ways in which this cycle can be disrupted by economic robustness resilience and sustainability methods for breaking this cycle are presented alongside an outline for the redesign of economic systems to protect against future crises This book offers insight into the creation of sound and resilient economies It will be relevant to students researchers and policymakers interested in economic crisis and economic policy

Heat Transfer Miguel Araiz,2021-09-22 Thermal energy is present in all aspects of our lives including when cooking driving or turning on the heat or air conditioning Sometimes this thermal management is not evident but it is essential for our comfort and lifestyle In addition heat transfer is vital in many industrial processes Thermal energy analysis is a complex task that usually requires different approaches With five sections this book provides information on heat transfer problems and using experimental techniques and computational models to analyse them

Constructal Human Dynamics, Security and Sustainability Adrian Bejan,Sylvie Lorente,António Miguel,2009-02-15 Globalization security infrastructure and energy sustainability can be designed based on a scientific principle In this book these objectives are approached based on constructal theory which means to design such projects as global flow architectures that are alive with movement of personnel equipment information education etc Constructal Human Dynamics Security and Sustainability highlights the progress made during the NATO Advanced Research Workshop held in vora Portugal in May 2008 This workshop brought together social scientists with physicists engineers and biologists Together they addressed main topics such as human dynamics viewed as natural phenomena of design generation flow networks for distribution and collection large scale construction projects e g airports waste storage logistics decontamination energy supply routes distributed energy systems water resources management environmental security sustainability and globalization The chapters selected for this book represent the interdisciplinary approach and team atmosphere that

emerged in vora *Constructal Law and the Unifying Principle of Design* Luiz A.O. Rocha, Sylvie Lorente, Adrian Bejan, 2012-12-04 Design happens everywhere whether in animate objects e g dendritic lung structures bacterial colonies and corals inanimate patterns river basins beach slope and dendritic crystals social dynamics pedestrian traffic flows or engineered systems heat dissipation in electronic circuitry This design in nature often takes on remarkably similar patterns which can be explained under one unifying Constructal Law This book explores the unifying power of the Constructal Law and its applications in all domains of design generation and evolution ranging from biology and geophysics to globalization energy sustainability and security The Constructal Law accounts for the universal tendency of flow systems to morph into evolving configurations that provide greater and easier access over time The Constructal Law resolves the many and contradictory ad hoc statements of optimality end design and destiny in nature such as minimum and maximum entropy production and minimum and maximum flow resistance and also explains the designs that are observed and copied in biomimetics Constructal Law and the Unifying Principle of Design covers the fundamentals of Constructal Theory and Design as well as presenting a variety of state of the art applications Experts from the biological physical and social sciences demonstrate the unification of all design phenomena in nature and apply this knowledge to novel designs in modern engineering such as vascularization for self healing and self cooling materials for aircraft and tree fins and cavities for heat transfer enhancement *Cancer: An Integrative Approach* Doru Paul, 2026-01-01 This book represents the synthesis of many current cancer theories which combined offers a novel and innovative approach in the diagnosis prevention and treatment of cancer It introduces a new and different paradigm in the diagnosis prevention and treatment of cancer by taking into account the organism as a whole which is very different from the current cellular tissular approach toward cancer In this new paradigm cancer involves dynamic interactions with the entire body and its internal milieu Focusing on these interactions will permit pre clinical cancer diagnosis and novel treatment approaches This onco holobiont model integrates most of the current malignant process models and it is intended for the use of practitioners clinicians cancer researchers and students with a particular interest in cancer The goal of this book is to inspire scientists to go beyond the current methods in the treatment of cancer and discover new paradigms *Previews of Heat and Mass Transfer*, 2001 **Advanced Engineering Thermodynamics** Adrian Bejan, 1997 The first law of thermodynamics The second law of thermodynamics The two laws combined the destruction of exergy Single phase systems Exergy analysis Multiphase systems Chemically reactive systems Power generation Solar power Refrigeration Thermodynamic optimization Irreversible thermodynamics Constructal theory of organization in nature Convection Heat Transfer Adrian Bejan, 2004-07-26 This extensive update of a well known and respected title is revised for greater accessibility and to include new cutting edge topics Publisher s description Dissertation Abstracts International, 2005 *Heat Transfer* Adrian Bejan, 2022-03-22 HEAT TRANSFER Provides authoritative coverage of the fundamentals of heat transfer written by one of the most cited authors in all of Engineering

Heat Transfer presents the fundamentals of the generation use conversion and exchange of heat between physical systems A pioneer in establishing heat transfer as a pillar of the modern thermal sciences Professor Adrian Bejan presents the fundamental concepts and problem solving methods of the discipline predicts the evolution of heat transfer configurations the principles of thermodynamics and more Building upon his classic 1993 book Heat Transfer the author maintains his straightforward scientific approach to teaching essential developments such as Fourier conduction fins boundary layer theory duct flow scale analysis and the structure of turbulence In this new volume Bejan explores topics and research developments that have emerged during the past decade including the designing of convective flow and heat and mass transfer the crucial relationship between configuration and performance and new populations of configurations such as tapered ducts plates with multi scale features and dendritic fins Heat Transfer Evolution Design and Performance Covers thermodynamics principles and establishes performance and evolution as fundamental concepts in thermal sciences Demonstrates how principles of physics predict a future with economies of scale multi scale design vascularization and hierarchical distribution of many small features Explores new work on conduction architecture convection with nanofluids boiling and condensation on designed surfaces and resonance of natural circulation in enclosures Includes numerous examples problems with solutions and access to a companion website Heat Transfer Evolution Design and Performance is essential reading for undergraduate and graduate students in mechanical and chemical engineering and for all engineers physicists biologists and earth scientists

Critique of Constructal Theory XueTao Cheng,2019-09-12 Constructal theory has been extensively used to analyze and optimize many different shapes and structures in both living and non living systems It is generally considered to be a law that could govern the evolutions of shapes and structures in biology physics technology and social organization Accordingly it seems that the constructal method is suitable for designing and analyzing all kinds of shapes and structures in the world However in most cases the details for its applications were not carefully checked meaning that it was often incorrectly applied and that many unreasonable or inaccurate results were provided This book systematically reviews and checks the applications of constructal theory in street design economics heat transfer optimization flow systems and explanations of natural structures and social phenomena Every detail of the models methods optimizations applications results and conclusions is analysed with careful consideration of theoretical derivations and typical examples Accordingly the problems and mistakes in the applications of the theory are directly pointed out and discussed in detail The abuse and limitation of the constructal approach are also discussed In many cases it is shown that the theory has significant flaws and is even not applicable in certain circumstances As constructal theory is widely used in the analysis and design of shapes and structures this book will be essential for scientists researchers engineers teachers postgraduates and undergraduates in the fields of structure analysis design and optimization in physics biology flow dynamics heat transfer and thermodynamics Trois études sur la loi constructale d'Adrian Bejan Abdelkader Bachta,Jean G. Dhombres,Angèle Kremer-Marietti,2008 Les auteurs
