

that the moon's orbital path is nearly parallel to the horizon. Because of its low inclination on successive nights it will be at its minimum delay of time of rising, that is, the moon will rise nearly the same time each night for this time of year. This phenomenon can offer additional illumination past the time of sunset, and therefore, allow for added time of light during the traditional northern hemisphere fall harvest. The following month's full moon is called the Hunter's moon for the same reason except that it allows for additional time for the fall hunt which was so essential in the days of our forefathers.

QUESTIONS:

1. The diagram below represents a top view of the earth-moon system. The dot on the circle in the center represents the north pole of the

earth, and the dots in the center of the other circles represent the north pole of the moon. The arrow indicates the direction to the sun, and the direction the sunlight is coming from. Complete the parts a - j of this question.

- a. Using an arrow, indicate on the earth the direction of rotation of the earth.
- b. Using an arrow, indicate along the moon's orbit the direction of revolution of the moon.
- c. Using an arrow, indicate on the new moon the direction of rotation of the moon.
- d. On the lines at position 1 - 4 beside the earth, indicate the time it would be for an observer at these positions. Recall time is indicated by the relative position of the sun.
