Atomic And Molecular Beams Production And Collimation:

Atomic and Molecular Beams Cyril Bernard Lucas,2013-12-13 Atomic and molecular beams are employed in physics and chemistry experiments and to a lesser extent in the biological sciences These beams enable atoms to be studied under collision free conditions and allow the study of their interaction with other atoms charged particles radiation and surfaces Atomic and Molecular Beams Production and Collimation explores the latest techniques for producing a beam from any substance as well as from the dissociation of hydrogen oxygen nitrogen and the halogens The book not only provides the basic expressions essential to beam design but also offers in depth coverage of Design of ovens and furnaces for atomic beam production Creation of atomic beams that require higher evaporation temperatures Theory of beam formation including the Clausing equation and the transmission probability Construction of collimating arrays in metals plastics glass and other materials Optimization of the design of atomic beam collimators While many review articles and books discuss the application of atomic beams few give technical details of their production Focusing on practical application in the laboratory the author critically reviews over 800 references to compare the atomic and molecular beam formation theories with actual experiments Atomic and Molecular Beams Production and Collimation is a comprehensive source of material for experimentalists facing the design of any atomic or molecular beam and theoreticians wishing to extend the theory

Atomic and Molecular Beams Roger Campargue,2012-12-06 Atomic and Molecular Beams covers the state of the art in this field both theoretically and experimentally With many contributions from leading researchers including several Nobel laureates this book will serve as a long lasting source of reference on all aspects of fundamental research into or using atomic and molecular beams The topics covered in this volume include amongst others laser cooling and manipulation of atoms and molecules alignment relaxation and condensation in supersonic jets photodissociation spectroscopy and state imaging in beams dynamics of elementary molecular collisions production and properties of clusters and nanoparticles and beam interactions with surfaces *Nuclear Science Abstracts* ,1973-07 **Atom and Ion Sources** László Vályi,1977
