### Using only Random Forest Algorithm (1)

Seasonally impacts and exact normalization in financial information have been very much noticed in the monetary financial matters writing for more than seventy years. This methodology proposes a special framework that utilizes novel AI strategies to forecast the value return over time occasional occasions, and afterward utilizes these expectations to form a beneficial exchanging technique.

In this methodology the creators present a mechanized exchanging framework dependent on execution weighted groups of irregular backtests that improves the benefit and randomized exchanging irregularly occasions.

An investigation of different relay procedures is provided just as an investigation of the benefits of different strategies for number weighting. The outcomes show that velocity-weighted images of advisory methods to create prevalent outcomes as far as both productivity and expectations returns combined and other useful strategies.

Figure 1 shows the diagrammatic representation of the system that was implemented.

### Using Random Forest and Profit Regression (2)

In Forex there are numerous money sets and many exchanging individuals and each pair is not the same as the other, and every individual thinks in his own specific manner. Tracking down the best exchanging methodology is actually a mind boggling discussion. Their methodology was to present an execution analysis model that produces beneficial investment system procedures.

The proposed methodology permits improving exchanging results in several high-recurrence exchanging. Such outcomes are promising for research on sequential mix of numerous calculations to Forex portfolio the execution. It is presumed that algorithmic exchanging dependent on blend of arrangement and Profit relay can be powerful in improving the forecast results. This blend assists with recognizing short-term occasions to purchase or to sell money sets.

Figure 2 shows the performance evaluation result of Random Forest plotted into a graph of real and predicted values.

*Automated Trading with Boosting and Expert Weighting* Germán G. Creamer, 2013 We propose a multi stock automated trading system that relies on a layered structure consisting of a machine learning algorithm an online learning utility and a risk management overlay Alternating decision tree ADT which is implemented with Logitboost was chosen as the underlying algorithm One of the strengths of our approach is that the algorithm is able to select the best combination of rules derived from well known technical analysis indicators and is also able to select the best parameters of the technical indicators Additionally the online learning layer combines the output of several ADTs and suggests a short or long position Finally the risk management layer can validate the trading signal when it exceeds a specified non zero threshold and limit the application of our trading strategy when it is not profitable We test the expert weighting algorithm with data of 100 randomly selected companies of the Samp P 500 index during the period 2003ndash 2005 We find that this algorithm generates abnormal returns during the test period Our experiments show that the boosting approach is able to improve the predictive capacity when indicators are combined and aggregated as a single predictor Even more the combination of indicators of different stocks demonstrated to be adequate in order to reduce the use of computational resources and still maintain an adequate predictive capacity

**Machine Learning for Asset Managers** Marcos M. López de Prado, 2020-04-22 Successful investment strategies are specific implementations of general theories An investment strategy that lacks a theoretical justification is likely to be false Hence an asset manager should concentrate her efforts on developing a theory rather than on backtesting potential trading rules The purpose of this Element is to introduce machine learning ML tools that can help asset managers discover economic and financial theories ML is not a black box and it does not necessarily overfit ML tools complement rather than replace the classical statistical methods Some of ML s strengths include 1 a focus on out of sample predictability over variance adjudication 2 the use of computational methods to avoid relying on potentially unrealistic assumptions 3 the ability to learn

complex specifications including nonlinear hierarchical and noncontinuous interaction effects in a high dimensional space and 4 the ability to disentangle the variable search from the specification search robust to multicollinearity and other substitution effects

*Computational Intelligence in Recent Communication Networks* Mariya Ouaisa,Zakaria Boulouard,Mariyam Ouaisa,Bassma Guermah,2022-02-21 This book focuses on the use of Artificial Intelligence and Machine Learning AI ML based techniques to solve issues related to communication networks their layers as well as their applications The book first offers an introduction to recent trends regarding communication networks The authors then provide an overview of theoretical concepts of AI ML techniques and protocols used in different layers of communication Furthermore this book presents solutions that help analyze complex patterns in user data and ultimately improve productivity Throughout AI ML based solutions are provided for topics such as signal detection channel modeling resource optimization routing protocol design transport layer optimization user application behavior prediction software defined networking congestion control communication network optimization security and anomaly detection The book features chapters from a large spectrum of authors including researchers students as well as industrials involved in research and development

A Boosting Approach for Automated Trading Germán G. Creamer,2013 This paper describes an algorithm for short term technical trading The algorithm was tested in the context of the Penn Lehman Automated Trading PLAT competition The algorithm is based on three main ideas The first idea is to use a combination of technical indicators to predict the daily trend of the stock the combination is optimized using a boosting algorithm The second idea is to use the constant rebalanced portfolios within the day in order to take advantage of market volatility without increasing risk The third idea is to use limit orders rather than market orders in order to minimize transaction costs

Automated Trading with Genetic-Algorithm Neural-Network Risk Cybernetics Lanz Chan,2015 Recent years have witnessed the advancement of automated algorithmic trading systems as institutional solutions in the form of autobots black box or expert advisors However little research has been done in this area with sufficient evidence to show the efficiency of these systems This paper builds an automated trading system which implements an optimized genetic algorithm neural network GANN model with cybernetic concepts and evaluates the success using a modified value at risk MVaR framework The cybernetic engine includes a circular causal feedback control feature and a developed golden ratio estimator which can be applied to any form of market data in the development of risk pricing models The paper applies the Euro and Yen forex rates as data inputs It is shown that the technique is useful as a trading and volatility control system for institutions including central bank monetary policy as a risk minimizing strategy Furthermore the results are achieved within a 30 second timeframe for an intra week trading strategy offering relatively low latency performance The results show that risk exposures are reduced by four to five times with a maximum possible success rate of 96% providing evidence for further research and development in this area
