Swamidass,2006-09-21 The Encyclopedia of Production and Manufacturing Management is an encyclopedia that has been  
developed to serve this field as the fundamental reference work Over the past twenty years the field of production and  
operations management has grown more rapidly than ever and consequently its boundaries have been stretched in all  
directions For example in the last two decades production and manufacturing management absorbed in rapid succession  
several new production management concepts manufacturing strategy focused factory just in time manufacturing concurrent  
engineering total quality management supply chain management flexible manufacturing systems lean production and mass  
customization to name a few This explosive growth makes the need for this volume abundantly clear The manufacturing  
industry thinks and acts more broadly than it did several decades ago The most notable change has been the need for  
manufacturing managers to think in technological strategic and competitive terms This is a very favorable development and  
it leads to manufacturing success The entries in this encyclopedia include the most recent technical and strategic innovations  
in production and manufacturing management The encyclopedia consists of articles of varying lengths The longer articles on  
important concepts and practices range from five to fifteen pages There are about 100 such articles written by nearly 100  
authors from around the world In addition there are over 1000 shorter entries on concepts practices and principles The  
range of topics and depth of coverage is intended to suit both student and professional audiences The shorter entries provide  
digests of unfamiliar and complicated subjects Difficult subjects are made intelligible to the reader without oversimplification  
The strategic and technological perspectives on various topics give this Encyclopedia its distinctiveness and uniqueness The  
world of manufacturing today is increasingly competitive It is apparent that manufacturers must respond to these  
competitive pressures with technical and strategic innovation This encyclopedia has been developed to help researchers  
students and those in the manufacturing industry to understand and implement these ongoing changes in the field
