

Practice Problems: Stereochemistry

- 1) For each of the following structures, determine whether it is chiral or not. Can you identify all the stereogenic centres(s) and name their absolute configurations? Recall that a molecule may possess stereogenic centres but not be chiral, or vice versa.

- 2) Some molecules have stereochemistry despite the fact that they have no stereogenic centres. Usually, this arises because of structural hindrance to internal motion. Can you draw the *enantiomer* of each of the following chiral molecules?
