Ranschaert, Sergey Morozov, Paul R.

Algra, 2019-01-29 This book provides a thorough overview of the ongoing evolution in the application of artificial intelligence (AI) within healthcare and radiology, enabling readers to gain a deeper insight into the technological background of AI and the impacts of new and emerging technologies on medical imaging. After an introduction on game changers in radiology such as deep learning technology, the technological evolution of AI in computing science and medical image computing is described with explanation of basic principles and the types and subtypes of AI. Subsequent sections address the use of imaging biomarkers, the development and validation of AI applications, and various aspects and issues relating to the growing role of big data in radiology. Diverse real-life clinical applications of AI are then outlined for different body parts, demonstrating their ability to add value to daily radiology practices. The concluding section focuses on the impact of AI on radiology and the implications for radiologists, for example with respect to training. Written by radiologists and IT professionals, the book will be of high value for radiologists, medical clinical physicists, IT specialists, and imaging informatics professionals. *Artificial Intelligence Suitability. Assessment of Manufacturing-Execution-System Functions* Yasin Sengöz, 2020-09-01 Master's Thesis from the year 2020 in the subject Computer Sciences, Artificial Intelligence, grade 2.0. Jnkping International Business School, School of Engineering, course Final Project Work in Production Systems, language English, abstract. The thesis work introduces an assessment framework consisting of decisive criteria and related indicators which describe qualitatively the suitability of AI for MES functions based on three criteria with related indicators. In addition, the researcher displays furthermore how the developed assessment framework can be used in order to assess the MES functions regarding their AI readiness. In order to cope with the findings through the thesis work, an inductive research approach has been applied. Existing literature in the fields of intelligent manufacturing, Manufacturing Execution Systems, machine learning, deep learning, intelligent manufacturing, digital twin, and assessment methodologies have been extensively studied in order to base the theoretical developed framework on grounded theory. A case study was carried out in order to test the validity and reliability of the developed assessment framework for industry. The outcome of this thesis work was an assessment framework consisting of decisive criteria and related indicators when evaluating a MES function in respect to its AI suitability. Furthermore, an assessment checklist has been provided for the industry in order to be able to assess a MES function regarding AI support in a quick and pragmatic manner. To generate a more generalizable assessment framework, criteria and indicators have to be adapted. Likewise, testing the outcome of analogue and digital assessment methodologies will provide material for

future studies Artificial Intelligence arises in the manufacturing field very rapidly Implementing Artificial Intelligence AI solutions and algorithms in the manufacturing environment is a well known research field in academia On the other hand Manufacturing Execution System MES providers do not have a theoretical and pragmatic framework regarding the evaluation of MES functions in respect to their suitability for Artificial Intelligence In order to be able to pre evaluate whether a MES function shall be AI supported an intense literature research has been conducted Academia shows few investigations regarding this field of research Recent studies have been concerning about possible applications for MES functions in combination with AI However there is a lack of research in terms of pre evaluating a MES function before embedding the function with AI support since the development of AI solutions for MES functions without pre evaluating those bears a waste of valuable resources
