## Hyperion Series Bruker:

The Advertising Red Books, 2010 Franz Kline Corina E. Rogge, 2022-08-30 This book offers the most detailed investigation thus far of the materials and methods of this key American Abstract Expressionist artist Although Franz Kline was one of the seminal figures of the American Abstract Expressionist movement he is less well known than contemporaries such as Jackson Pollock and Willem de Kooning This is partly because Kline unlike most artists in his circle did not like to write or talk about his own art In fact when asked in a panel to discuss abstract art Kline said I thought that was the reason for trying to do it because you couldn't talk about it Still his impact was such that the critic and art historian April Kingsley wrote Abstract Expressionism as a movement died with him This volume the newest addition to the Artist's Materials series from the Getty Conservation Institute looks closely at both Kline's life and work from his early years in Pennsylvania to his later success in New York City Kline's iconic paintings are poised on a critical cusp some have already undergone conservation but others remain unaltered and retain the artist's color gloss and texture and they are surprisingly vulnerable The authors' presentation of rigorous examination and scientific analysis of more than thirty of Kline's paintings from the 1930s through the 1960s provides invaluable insight into his life materials and techniques This study provides conservators with essential information that will shape future strategies for the care of Kline's paintings and offers readers a more thorough comprehension of this underappreciated artist who is so central to American Abstract Expressionism **Fourier**

**Transforms** Goran Nikolic, 2011-04-01 New analytical strategies and techniques are necessary to meet requirements of modern technologies and new materials In this sense this book provides a thorough review of current analytical approaches industrial practices and strategies in Fourier transform application Linear Electrodynamic Response of Topological Semimetals Artem V. Pronin, 2023-08-17 This book provides a model description for the electromagnetic response of topological nodal semimetals and summarizes recent experimental findings in these systems Specifically it discusses various types of topological semimetals Dirac Weyl nodal line triple point and multifold semimetals and provides description for the characteristic features of the linear electrodynamic response for all these types of materials Topological semimetals possess peculiar bulk electronic band structure which leads to unusual electrodynamic response For example the low energy inter band optical conductivity of nodal semimetals is supposed to demonstrate power law frequency dependence and the intra and inter band contributions to the conductivity are often mixed Further the magneto optical response is also unusual because of the non equidistant spacing between the Landau levels Finally in semimetals with chiral electronic bands e.g. in Weyl semimetals the simultaneous application of parallel magnetic and electric fields leads to the chiral anomaly i.e. to a

misbalance between the electrons with different chiralities This misbalance affects the electrodynamic properties of the material and can be detected optically All these points are addressed here in detail The book is written for a wide audience of physicists working in the field of topological condensed matter physics It gives a pedagogical introduction enabling graduate
