IBM Integration Bus provides connectivity and universal data transformation in heterogeneous IT environments. It enables businesses of any size to eliminate point-to-point connections and batch processing, regardless of operating system, protocol, and data format.

This course teaches you how to use IBM Integration Bus to develop, deploy, and support message flow applications. These applications use various messaging topologies to transport messages between service requesters and service providers, and also allow the messages to be routed, transformed, and enriched during processing.

In this course, you learn how to construct applications to transport and transform data. The course also explores how to control the flow of data by using various processing nodes, and how to use databases and maps to transform and enrich data during processing. You also learn how to construct data models by using the Data Format Description Language (DFDL).

Essentials of Application Development on IBM Cloud Ahmed Azraq, Hala A. Aziz, Uzma Siddiqui, IBM Redbooks, 2017-12-11

This IBM Redbooks publication is designed to teach university students and app developers the foundation skills that are required to develop test and deploy cloud based applications on IBM Cloud. It shows the latest features of IBM Cloud for developing cloud applications, enhancing applications by using managed services, and the use of DevOps services to manage applications. This book is used as a presentation guide for the IBM Skills Academy track Cloud Application Developer and as preparation material for the IBM professional certification exam IBM Certified Application Developer Cloud Platform. The primary target audience for this course is university students in undergraduate computer science and computer engineering programs with no previous experience working in cloud environments. However, anyone new to cloud computing or IBM Cloud can also benefit from this course.

Hybrid Cloud Event Integration: Integrate Your Enterprise and Cloud with Bluemix Integration Services Jesse Aulsebrook, Richard Scott Balson, Maxime Cenatiempo, Vasfi Gucer, Shamim Hossain, Muhammad Atif Mehmood, Raj Mehra, Duy Nguyen, Bancha Setthanan, Amar Shah, IBM Redbooks, 2016-02-18

The event centric hybrid cloud integration revolves around applications running based on events or messages. The new event centric approach to hybrid cloud aims to simplify the task of managing these messages while increasing the overall reliability of the system. Event centric applications work well in the cloud due to the varying intensity and frequency of events. These fluctuations fit well into a cloud infrastructure that can dynamically scale to fit those needs. An event centric approach cuts down on communication overhead for an application, thus helping to speed up the development process.

IBM Hybrid Integration Services is a set of hybrid cloud capabilities in IBM Bluemix that allows businesses to create hybrid clouds by connecting their Bluemix environment to on-premises systems at the application programming interface (API), data, or event level. In November 2015, the IBM International Technical Support Organization (ITSO) IBM Redbooks team published a Redbooks publication that covers hybrid cloud scenarios with Bluemix for API and data integrations: *Hybrid Cloud Data and API Integration: Integrate Your Enterprise and Cloud with Bluemix Integration Services* SG24 8277 and can be found at the following website: <http://www.redbooks.ibm.com/Redbooks.nsf/RedbookAbstracts/sg248277.html>. *Open Hybrid Cloud Event Integration: Integrate Your Enterprise and Cloud with Bluemix Integration Services* SG24 8281 is a companion book to SG24 8277 and focuses on event centric hybrid cloud integrations with Bluemix.

about version 3.1 of the MQTT specification. This IBM Redbooks publication provides information about how IBM MessageSight in combination with MQTT facilitates the expansion of enterprise systems to include mobile devices and m2m communications. This book also outlines how to connect IBM MessageSight to an existing infrastructure either through the use of IBM WebSphere MQ connectivity or the IBM Integration Bus formerly known as WebSphere Message Broker. This book describes IBM MessageSight product features and facilities that are relevant to technical personnel such as system architects to help them make informed design decisions regarding the integration of the messaging appliance into their enterprise architecture. Using a scenario based approach you learn how to develop a mobile application and how to integrate IBM MessageSight with other IBM products.
