Cognitive Wireless Communication Networks Ekram Hossain, Vijay K. Bhargava, 2007-10-23 A Brief Journey through Cognitive Wireless Communication Networks Ekram Hossain University of Manitoba Winnipeg Canada Vijay Bhargava University of British Columbia Vancouver Canada Introduction Cognitive radio has emerged as a promising technology for maximizing the utilization of the limited radio bandwidth while accommodating the increasing amount of services and applications in wireless networks A cognitive radio CR transceiver is able to adapt to the dynamic radio environment and the network parameters to maximize the utilization of the limited radio resources while providing flexibility in wireless access The key features of a CR transceiver are awareness of the radio environment in terms of spectrum usage power spectral density of transmitted received signals wireless protocol signaling and intelligence This intelligence is achieved through learning for adaptive tuning of system parameters such as transmit power carrier frequency and modulation strategy at the physical layer and higher layer protocol parameters Development of cognitive radio technology has to deal with technical and practical considerations which are highly multidisciplinary as well as regulatory requirements There is an increasing interest on this technology among the researchers in both academia and industry and the spectrum policy makers The key enabling techniques for cognitive radio networks also referred to as dynamic spectrum access networks are wideband signal processing techniques for digital radio advanced wireless communications methods artificial intelligence

to answer the fundamental question of how to handle the presence of uncertainty about the design parameters in the respective optimization problem formulations **Proceedings of the IVth International Symposium on Applications of Modelling as an Innovative Technology in the Agri-Food-Chain** P.
