Why aren't the elements listed in alphabetical order?

## Why?

As chemists go, the periodic table is a bit odd. It's not square. Large portions of the table appear to be missing at the top. It's not organized alphabetically so elements can be found easily. But to a chemist, the periodic table is a very powerful tool. The periodic table is organized by properties, both chemical and physical. These properties relate to the electronic structure of the atoms of each element. In today's activity, you are going to study how the ground state electron configurations and structure of atoms are related to the shape and organization of the periodic table.

## Model 1 – Blank Periodic Table

The diagram shows a blank periodic table grid. The rows are numbered 1 to 7 on the left. The columns are numbered 1 to 18 at the bottom. The s-block is labeled above the first two columns. The p-block is labeled above the last six columns. The d-block is labeled above the middle ten columns, starting from row 4. The f-block is labeled above a separate row of 14 columns below the main grid.

- Obtain a card with electron configurations for your group as assigned by your teacher.
  - Record your team number \_\_\_\_\_ and team name \_\_\_\_\_.
  - For each element on your card, write the end of the configuration (the unsharpened portion).
- What is similar about the last orbital notation appearing at the end of the configuration for each element in your set?
