Extraction Of The Essential Oil Limonene From Oranges:

Handbook of Fruit Wastes and By-Products Khalid Muzaffar, Sajad Ahmad Sofi, Shabir Ahmad Mir, 2022-10-03

Processing of fruits produces large volumes of wastes and by products which can create environmental problems. However, these fruit processing residues have amazing nutritional composition containing good amounts of nutrients and biofunctional components. So the current trend in the present world is to efficiently utilize these fruit wastes and byproducts and minimize their impact on the environment. Proper utilization of fruit processing wastes and byproducts would not only emerge as a source of extra profit to the fruit processing industry but also will help in lessening the environment pollution due to these fruit processing byproducts. *Handbook of Fruit Wastes and By Products: Chemistry, Processing Technology and Utilization* will be the first book devoted to fruit processing wastes and byproducts of a wide range of important fruits including tropical, subtropical, and temperate fruits. Key features: Provides comprehensive information about the chemistry of wastes and byproducts obtained during fruit processing; Provides in-depth information about the bioactive potential of fruit processing wastes and byproducts; Explores new strategies used for proper valorization of fruit processing residues; Describes the utilization of nutraceutical components derived from fruit processing residues in fabrication of novel functional foods. Although there are some general books on byproducts of the food processing industry, but they are limited in context related to only some particular fruits. The unique quality of this book is that it provides a full-length study of the different developments made right from the basic technologies involved in management of fruit wastes and byproducts to the recent advancements and future areas of research to be done on this subject. This book would be a valuable resource for scientists, researchers, professionals, and enterprises that aspire in management of fruit processing wastes and byproducts and their utilization.

Adding Value to Fruit Wastes Sneha Punia Bangar, Parmjit S Panesar, 2024-06-01. *Value Addition of Fruit Wastes: Extraction, Properties, and Applications* provides the latest technologies used in fruit waste to extract, isolate, and characterize functional active compounds and their diversified pharmacological, food, agricultural, and industrial applications. Divided into 3 sections, the book explores emerging technologies for extraction of functional components, thoroughly discusses value-added components, and works as a guide to its applications. The book also covers fruit wastes for extracting starch to provide more cereal crops available as food, besides supporting the efficient utilization of fruit wastes to bring many more opportunities for extraction of functional components in a sustainable manner for food applications. Written by a team of experts in the field, this book provides technicians, researchers, food technology experts, food industry personnel, and academia with value addition to the fruit waste and a lot more opportunities for extraction of functional components in a sustainable manner for food applications. Covers valorization approaches of fruit waste for starch, protein, fibers, and phenolics. Includes novel green techniques for the extraction of functional compounds. Brings industrial applications of value-added functional compounds. *Recent Advances in Citrus Fruits* Sukhvinder Singh Purewal, Sneha Punia Bangar, Pinderpal Kaur, 2023-10-25. When compared to other

major fruits citrus fruits have resistance to pests and diseases a short growing season and productivity even under harsh environmental conditions Worldwide citrus fruits are well known for their nutrients rich juice and medicinal properties Juice extracted from citrus fruits is rich source of vitamin C and various antioxidant compounds that are required to sustain a healthy life Fruits are consumed in raw as well as processed forms and the pharmacological importance of citrus fruits are not only limited to its edible parts but also to non edible seeds and peel that are also a rich source of bioactive constituents with health benefiting properties In current fruit processing techniques the peel is discarded as a byproduct after extraction of the juice Researchers and food scientists are now focusing on utilization of fruit waste byproducts to use them as a substrate in food processing cosmetic and pharmaceutical industries Whole fruits seeds contain important antioxidant and antimicrobial properties Recent advances in Citrus Fruits provide in depth knowledge on the nutritional profile production details processing products and health benefits of citrus fruits The most important citrus fruits from lemons and limes to grapefruit and mosambi are covered in full providing researchers with full breakdowns on each citrus fruit s nutritional makeup processing specifics and agrarian importance health benefits and use in various products across a wide range of industries This text covers all of the latest research related to citrus fruits and provides researchers with a curated source on these valuable fruits
