*The Science Masters' Book, Series IV* School science review,1961      **Ethics and Experiments** Scott Desposato,2015-12-22 For most of political science s history discussions about professional ethics had nothing to do with human subjects Professional ethics involved integrity in the classroom fair tenure and promotion rule and the careful avoidance of plagiarism As most research was observational there was little need for attention to how scholarly activities might directly affect the subjects of our work Times have changed The dramatic growth in the use of experiments in social science especially overseas is generating unexpected ethical controversies The purpose of this volume is to identify debate and propose practical solutions to the most critical of these new ethical issues A leading team of internationally distinguished political science scholars presents the first examination of the practical and ethical challenges of research with human subjects in social science and policy studies Part 1 examines contextual challenges provided by experiments conducted overseas questions of culture religion security and poverty Part 2 examines questions of legal constraints on research focusing on questions of foreign review of international experiments Part 3 tackles the critical issues in field experiments including deception and consent impact on elections and careers the boundaries of the public officials exemption and the use of partner organizations to avoid Institutional Review Body IRB review Part 4 considers strategies for the future including training and education IRB reform institutional changes and norm development      The Review ,1919      *The Science Masters' Book, Series I.* School science review,1931      **Designing Experiments for the Social Sciences** Renita Coleman,2018-08-27 This book is a must for learning about the experimental design from forming a research question to interpreting the results this text covers it all Sarah El Sayed University of Texas at Arlington Designing Experiments for the Social Sciences How to Plan Create and Execute Research Using Experiments is a practical applied text for courses in experimental design The text assumes that students have just a basic knowledge of the scientific method and no statistics background is required With its focus on how to effectively design experiments rather than how to analyze them the book concentrates on the stage where researchers are making decisions about procedural aspects of the experiment before interventions and treatments are given Renita Coleman walks readers step by step on how to plan and execute experiments from the beginning by discussing choosing and collecting a sample creating the stimuli and questionnaire doing a manipulation check or pre test analyzing the data and understanding and interpreting the results Guidelines for deciding which elements are best used in the creation of a particular kind of experiment are also given This title offers rich pedagogy ethical considerations and examples pertinent to all social science disciplines      **Fifth Annual Workshop on Space Operations Applications and Research (SOAR '91)** ,1992      *Scientific and Technical Aerospace Reports* ,1991
