A Plant-Based Weight Loss Steve R Rivera,2024-02-22 There are no miracle foods or culinary concoctions that will make you slimmer Changing your food and activity habits gradually through manageable steps is the most effective method to lose weight No miracle weight loss supplement Unhealthy beliefs abound about losing weight There are no miracle foods or food combinations that will magically melt away extra body fat Make manageable lifestyle modifications to help you lose weight The greatest long term weight loss and maintenance strategies for overweight people involve eating a different diet and engaging in more physical activity Recognizing the energy in food Different nutrients are given to our body when we consume This comprises energy derived from the macronutrients carbohydrates protein and fat as well as vitamins minerals and antioxidants Although it is not necessary for life alcohol is not regarded as a real macronutrient even if it also provides energy Kilojoules included in food Kilojoules kJ are a unit of measurement for energy in food and beverages used in Australia Another energy unit that is still in use in some other nations like the USA is calories cal The energy content of each

macronutrient varies per gram Protein 17kJ fat 37kJ carbohydrates 16kJ and alcohol 29kJ Fat and alcohol give far more energy per gram than protein and carbohydrates a 35g slice of bread has roughly 360kJ while 35g of butter has 1062kJ of energy nearly 3 times as much as the slice of bread That s not to argue that fats don t belong in a healthy diet they do It matters the kind and quantity of fat we eat Balancing the need for energy Our energy requirements differ based on variables like Age body size gender how active you are your genetics whether you re pregnant or breastfeeding Eating a balanced diet and getting adequate nutrient dense food is crucial To maintain a healthy weight consuming fewer high energy low nutrient foods is also essential Whether the extra energy you consume comes from fats carbs or proteins you will gain weight if your energy intake exceeds your energy expenditure Here are some prevalent misunderstandings regarding managing weight that should be dispelled You do not become fat from carbohydrates A balanced diet and a healthy body depend on carbohydrates They are the body s favored source of energy and power the kidneys brain and central nervous system among other essential organs Another essential energy source for activity is carbohydrates The pancreas secretes the hormone insulin to facilitate the transfer of glucose from the bloodstream into the cells The digestive system breaks down carbs into glucose Eating spaghetti potatoes or any other food high in carbohydrates won t make you gain weight In actuality 45 to 65% of energy requirements should come from carbohydrates according to the Australian Dietary Guidelines There are better and worse types of carbs The blood glucose response to carbohydrates with lower glycaemic indices GI is slower and flatter They can make us feel fuller and take longer to digest Fruit legumes and whole grains are examples of lower GI foods since they are less processed or refined
