Barney,2004 The 2003 incarnation of the Colloquia 2000 series on Applied Media Ethics the fourth in a decade long series offered an opportunity for application of various comparative yardsticks testing media ethics maturity This special double issue reflects concerns of interest to most areas of professional ethics and concerns of particular interest to media ethicists the nature of accountability obligation power virtue and professional client relationships In addition it demonstrates a divide between media ethicists and those of other professions investigates the nature of power discusses the subjects of journalism and virtue carries out the theme of ethics across the professions in the Cases and Commentaries where five writers grapple with one of the better publicized issues in recent media ethics literature the Los Angeles Times imbroglio known as The Staple Affair and includes a book review section covering advertising and consumer citizens advertising s erotic history global public relations general media ethics textbooks understanding rules in society and business media coverage of the war in Iraq and a collection of free speech profiles **Ethics Across the Curriculum—Pedagogical Perspectives** Elaine E. Englehardt,Michael S. Pritchard,2018-05-08 This book features articles by more than twenty experienced teachers of ethics who are committed to the idea that ethics can and should be taught virtually anywhere in the education curriculum They explore a variety of ways in which this might best be done Traditionally confined largely to programs in philosophy and religion the teaching of ethics

has in recent decades spread across the curriculum education The contributors to this book discuss the rationale for supporting such efforts the variety of challenges these efforts face and the sorts of benefits faculty and students who participate in ethics across the curriculum endeavors can expect An overriding theme of this book is that the teaching of ethics should not be restricted to one or two courses in philosophy or religion programs but rather be addressed wherever relevant anywhere in the curriculum For example accredited engineering programs are expected to ensure that their students are introduced to the ethical dimensions of engineering This can involve consideration of ethical issues within particular areas of engineering e g civil mechanical electrical chemical as distinctive segments of certain courses e g those that focus on design problems or as a full semester course in ethics in engineering Similar approaches can be taken in nursing medicine law social work psychology accountancy management and so on That is some emphasis on ethics can be expected to be found in broad range of academic disciplines However many ethical issues require careful attention from the perspectives of several disciplines at once and in ways that require their joining hands Recognizing that adequately addressing many ethical issues may require the inclusion of perspectives from a variety of disciplines makes apparent the need for effective communication and reflection across disciplines not simply within them This in turn suggests that faculty and their students can benefit from special programs that are designed to include participants from a variety of disciplines Such programs will be a central feature of this book Although some differences might arise in how such issues might best be discussed across different parts of the curriculum these discussions might be joined in ways that help students faculty administrators and the wider public better appreciate their shared ethical ground
