Other sections describe among other things new research that draws on developmental imaging to study the changing structure and function of the brain over the lifespan progress in establishing increasingly precise models of memory research that confirms the study of emotion and social cognition as a core area in cognitive neuroscience and new findings that cast doubt on the so called neural correlates of consciousness

Touching a Nerve Patricia Churchland,2013-07-15 A trailblazing philosopher s exploration of the latest brain science and its ethical and practical implications What happens when we accept that everything we feel and think stems not from an immaterial spirit but from electrical and chemical activity in our brains In this thought provoking narrative drawn from professional expertise as well as personal life experiences trailblazing neurophilosopher Patricia S Churchland grounds the philosophy of mind in the essential ingredients of biology She reflects with humor on how she came to harmonize science and philosophy the mind and the brain abstract ideals and daily life Offering lucid explanations of the neural workings that underlie identity she reveals how the latest research into consciousness memory and free will can help us reexamine enduring philosophical ethical and spiritual questions What shapes our personalities How do we account for near death experiences How do we make decisions And why do we feel empathy for others Recent scientific discoveries also provide insights into a fascinating range of real world dilemmas for example whether an adolescent can be held responsible for his actions and whether a patient in a coma can be considered a self Churchland appreciates that the brain based understanding of the mind can unnerve even our greatest thinkers At a conference she attended a prominent philosopher cried out I hate the brain I hate the brain But as Churchland shows he need not feel this way Accepting that our brains are the basis of who we are liberates us from the shackles of superstition It allows us to take ourselves seriously as a product of evolved mechanisms past experiences and social influences And it gives us hope that we can fix some grievous conditions and when we cannot we can at least understand them with compassion
