

Designation: E11 – 22

Standard Specification for Woven Wire Test Sieve Cloth and Test Sieves¹

This standard is issued under the fixed designation E11; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last approval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or approval.

This standard has been approved for use by agencies of the U.S. Department of Defense.

1. Scope²

1.1 This document specifies the technical requirements for: the woven wire test sieve cloth (sieve cloth) used in test sieves, the construction of test sieves, standard and non-standard test sieve frame sizes, and test procedures used to inspect sieve cloth and the test sieves. This specification applies to test sieves manufactured with sieve cloth having a nominal aperture size ranging from 125 millimetres (mm) down to 20 micrometres (μm).

1.2 Additional reference information can be found in Specifications E161, E323, E2016, and in Test Methods C430 and E2427.

1.3 The values stated in SI units shall be considered standard for the dimensions of the sieve cloth openings and the wire diameters used in the sieve cloth. The values stated in inch-pound units shall be considered standard with regard to the sieve frames, pans, and covers.

1.4 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.

1.5 This international standard was developed in accordance with internationally recognized principles of standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

¹ This specification is under the jurisdiction of ASTM Committee E29 on Particle and Spray Characterization and is the direct responsibility of Subcommittee E29.08 on Sieves, Sieving Methods, and Screening Media.

Current edition approved Feb. 1, 2022. Published May 2022. Originally approved in 1925. Last previous edition approved in 2020 as E11 – 20. DOI: 10.1520/E011-22.

² A Summary of Changes section appears at the end of this standard.

Manual of Geotechnical Laboratory Soil Testing Bashir Ahmed Mir,2021-10-03 Manual of Geotechnical Laboratory Soil Testing covers the physical index and engineering properties of soils including compaction characteristics optimum moisture content permeability coefficient of hydraulic conductivity compressibility characteristics and shear strength cohesion intercept and angle of internal friction Further this manual covers data collection analysis computations additional considerations sources of error precautionary measures and the presentation results along with well defined illustrations for each of the listed tests Each test is based on relevant standards with pertinent references broadly aimed at geotechnical design applications

FEATURES Provides fundamental coverage of elementary level laboratory characterization of soils Describes objectives basic concepts general understanding and appreciation of the geotechnical principles for determination of physical index and engineering properties of soil materials Presents the step by step procedures for various tests based on relevant standards Interprets soil analytical data and illustrates empirical relationship between various soil properties Includes observation data sheet and analysis results and discussions and applications of test results This manual is aimed at undergraduates senior undergraduates and researchers in geotechnical and civil engineering Prof Dr Bashir Ahmed Mir is among the senior faculty of the Civil Engineering Department of the National Institute of Technology Srinagar and has more than two decades of teaching experience Prof Mir has published more than 100 research papers in international journals and conferences chaired technical sessions in international conferences in India and throughout the world and provided consultancy services to more than 150 projects of national importance to various government and private agencies

Particle size measurement Terence Allen,2013-11-21 Although man s environment from the interstellar dust to the earth beneath his feet is composed to a large extent of finely divided material his knowledge of the properties of such materials is surprisingly slight For many years the scientist has accepted that matter may exist as solids liquids or gases although the dividing line between the states may often be rather blurred this classification has been upset by powders which at rest are solids when aerated may behave as liquids and when suspended in gases take on some of the properties of gases It is now widely recognized that powder technology is a field of study in its own right The industrial applications of this new science are far reaching The size of fine particles affects the properties of a powder in many important ways For example it determines the setting time of cement the hiding power of pigments and the activity of chemical catalysts the taste of food the potency of drugs and the sintering shrink age of metallurgical powders are also strongly affected by the size of the particles of which the powder is made up Particle size measurement is to powder technology as thermometry is to the study of heat and is in the same state of flux as thermometry

was in its early days Only in the case of a sphere can the size of a particle be completely described by one number
