YSEC Yearbook of Socio-Economic Constitutions 2020 Steffen Hindelang, Andreas Moberg, 2021-03-29 This book presents the very first interdisciplinarily grounded comprehensive appraisal of a future Common European Law on Investment Screening. Thereby it provides a foundation for a European administrative law framework for investment screening by setting out viable solutions and evaluating their pros and cons. Daimler the harbour terminal in Zeebrugge or Saxo Bank are only three recent examples of controversially discussed company takeovers in Europe. The elephant in the room is China and its Belt and Road Initiative. The political will in Europe is growing to more actively control investments flowing into the EU. The current regulatory initiatives raise several fundamental constitutional and regulatory issues. Surprisingly they have not been addressed in any depth so far. The book takes stock of the current rather fragmented regulatory approaches and combines contributions from leading international academics, practitioners and policy makers in their respective fields. Due to the volume's comprehensive approach, it is expected to influence the broader debate on the EU's upcoming regulation of this matter. The book is addressed to participants from academia as well as to representatives from government, business and civil society.

Since naval development requires huge financial resources and mostly takes place within the context of transnational industrial partnerships, this study also consciously adopts an industry perspective. The systemic problems involved in warship production and the associated material, financial, technological and political requirements currently remain overlooked aspects in the case of China. Drawing on first-hand working experience in the naval shipbuilding industry, the author provides transparent criteria for the evaluation of different naval technologies, strategic value, which other researchers can draw upon as a basis for further research in such diverse fields as International Security Studies, Naval Warfare Studies, Chinese Studies and International Relations.

Business Armin Krishnan,2016-03-03 The privatization of defence assets and the outsourcing of military services from the armed forces to the private sector is an increasing trend This book approaches the issue of military privatization by linking it to the transformation of the defence industries since the early 1990s and shows the extent to which many military functions and activities ranging from military research to military consulting training to operational support services have already been outsourced in the US and in Europe This detailed study provides new and updated information on the ongoing privatization of the defence sector and offers an original theoretical explanation as to why the most modern armed forces throughout the world have come increasingly to rely on private companies for nearly everything they do Contributing to a better understanding of military privatization and its close connection to technological change the book explains the complexity of the whole phenomenon and discusses its implications for national and international security
