Assessing Attention-Deficit/Hyperactivity Disorder Arthur D. Anastopoulos, Terri L. Shelton, 2005-12-27 Over the past two decades the assessment of Attention Deficit Hyperactivity Disorder AD HD has evolved into a sophisticated balance of science and clinical judgement essential for arriving at reliable and valid diagnostic de sions Because of the precarious mix of clinical and empirical skill needed to evaluate children with this disorder diagnostic practice in this area has been found wanting by many critics In fact a 1998 National Institutes of Health consensus panel concluded that existing diagnostic treatment practices point to the need for improved awareness by the health service sector conce ing an appropriate assessment treatment and follow up A more consistent set of diagnostic procedures and practice guidelines is of utmost importance p 21 Drs Arthur D Anastopoulos and Terri L Shelton have designed a book that addresses this need A number of themes are highlighted throughout the text Perhaps the most important is that the assessment guidelines set forth in this book represent a balance between science and practice The authors account for the realities of clinical practice in an age of managed care while challenging clinicians to heed the lessons of empirical research Although the use of empirically based asse ment procedures may at times fly in the face of cost constraints e g systematic evaluation of medication effects the authors present a strong argument for them Further they call upon their vast clinical experience to provide concrete suggestions for translating research findings into effective evaluations *Attention-Deficit Hyperactivity Disorder, Fourth Edition*

of outcome areas e.g. education, occupation, emotional and psychiatric functioning, substance use and abuse, sexual behavior as well as legal problems. One chapter focuses particularly on the outcome of girls with ADHD. Outcome areas explored are thus comprehensive and clinically very relevant. The book also explores the possible predictors of adult outcome. A whole chapter is devoted to treatment, medication and psychosocial as a predictor of outcome. In addition to treatment predictors explored include characteristics of the child e.g. IQ, severity of initial ADHD symptoms, initial comorbidity, characteristics of the family e.g. socioeconomic status, single parenthood, parental pathology and family functioning. In a summary chapter the impact and importance of these various predictors in different outcome areas e.g. education, occupation, emotional, social functioning, antisocial behavior, substance use and abuse and risky sexual and driving behaviors are explored. In summary the book provides a comprehensive view of the prognosis e.g. long term outcome of ADHD and key factors which can influence this outcome. Professionals and the general public will thus get a clear view of what can happen to children with ADHD as they proceed through adolescence and adulthood and address important prognostic and predictive factors in their treatment approaches to ensure better long term outcome in patients with ADHD.
