Ayres,Stefan Gößling-Reisemann,2007-01-16 What s in a name What in particular is metals management all about I suspect that my colleagues assumed that I would have a good answer given that the endowed Sandoz Chair I occupied from 1992 until my retirement in 2000 was entitled Environment and Management and at INSEAD I created a Center for Management of Environmental Resources CMER Metals are a subset of resources et voila However in all honesty management as such was never my core competence to use another phrase popularized by business schools Here comes the shocking secret We used the word management in those titles because INSEAD is a business school where everything has to have an application to business For my colleagues at INSEAD management is what we supposedly teach Good management they we think distinguishes successful enterprises from unsuccessful ones For some of our graduates management is what they give professional advice to corporate clients about For the rest of our graduates it is the umbrella word that describes their choice of career The implication conveyed by our choice of words is that metals can be regarded as one category of environmental resources and that resources including environmental resources can be managed in somewhat the same way that a corporation can be managed It is not even too far fetched to suggest that long run sustainability might be a management problem **Aluminium** ,2002 **Automotive Engineering International** ,2003 **Extrusion** ,2006 Journal of the Experimental Analysis of Behavior ,1975 **A Literature Review on Subsonic Free Turbulent Shear Flow** R. M. Halleen,1964 Solutions for both two dimensional flow and threedimensional axially symmetric flow are reviewed for the three major free turbulent shear flow topics the turbulent shear layer the turbulent wake and the turbulent jet Several models for the turbulent shear stress were used in some of these solutions The solutions are compiled in consistent nomenclature and compared For each of the three topics the defining partial differential equations for the particular turbulent shear stress models and geometric conditions are given followed by the transformation of the variables utilized in obtaining a solvable differential equation Finally the solution is presented Experimental mean velocity profile data for each condition are correlated and reduced to a single curve using the least squares curve fitting technique A table of coordinates for each curve is given including the standard deviation from the mean Other experimental information is also tabulated Author
