CUDA for Engineers Duane Storti, Mete Yurtoglu, 2015-11-02. CUDA for Engineers gives you direct hands-on engagement with personal high performance parallel computing, enabling you to do computations on a gaming level PC that would have required a supercomputer just a few years ago. The authors introduce the essentials of CUDA C programming clearly and concisely, quickly guiding you from running sample programs to building your own code. Throughout, you'll learn from complete examples you can build, run, and modify, complemented by additional projects that deepen your understanding. All projects are fully developed with detailed building instructions for all major platforms. Ideal for any scientist, engineer, or student with at least introductory programming experience, this guide assumes no specialized background in GPU-based or parallel computing. In an appendix, the authors also present a refresher on C programming for those who need it. Coverage includes: Preparing your computer to run CUDA programs; Understanding CUDA's parallelism model and C extensions; Transferring data between CPU and GPU; Managing timing, profiling, error handling, and debugging; Creating 2D grids; Interoperating with OpenGL to provide real-time user interactivity; Performing basic simulations with differential equations; Using stencils to manage related computations across threads; Exploiting CUDA's shared memory capability to enhance performance; Interacting with 3D data, slicing, volume rendering, and ray casting; Using CUDA libraries; Finding more CUDA resources and code. Realistic example applications include: Visualizing functions in 2D and 3D; Solving differential equations while changing initial or boundary conditions; Viewing processing images or image stacks; Computing inner products and centroids; Solving systems of linear algebraic equations; Monte Carlo computations.

Hands-On GPU Programming with Python and CUDA Dr. Brian Tuomanen, 2018-11-27. Build real-world applications with Python 2.7, CUDA 9, and CUDA 10. We suggest the use of Python 2.7 over Python 3.x since Python 2.7 has stable support across all the libraries we use in this book. Key Features: Expand your background in GPU programming; PyCUDA, scikit-cuda, and Nsight; Effectively use CUDA libraries such as cuBLAS, cuFFT, and cuSolver; Apply GPU programming to modern data science applications.

Book Description: Hands-On GPU Programming with Python and CUDA hits the ground running; you'll start by learning how to apply Amdahl's Law, use a code profiler to identify bottlenecks in your Python code, and set up an appropriate GPU programming environment. You'll then see how to query the GPU's features and copy arrays of data to and from the GPU's own memory. As you make your way through the book, you'll launch code directly onto the GPU and write full

blown GPU kernels and device functions in CUDA C You'll get to grips with profiling GPU code effectively and fully test and debug your code using Nsight IDE Next you'll explore some of the more well known NVIDIA libraries such as cuFFT and cuBLAS With a solid background in place you will now apply your new found knowledge to develop your very own GPU based deep neural network from scratch You'll then explore advanced topics such as warp shuffling dynamic parallelism and PTX assembly In the final chapter you'll see some topics and applications related to GPU programming that you may wish to pursue including AI graphics and blockchain By the end of this book you will be able to apply GPU programming to problems related to data science and high performance computing What you will learn Launch GPU code directly from Python Write effective and efficient GPU kernels and device functions Use libraries such as cuFFT cuBLAS and cuSolver Debug and profile your code with Nsight and Visual Profiler Apply GPU programming to datascience problems Build a GPU based deep neural network from scratch Explore advanced GPU hardware features such as warp shuffling Who this book is for Hands On GPU Programming with Python and CUDA is for developers and data scientists who want to learn the basics of effective GPU programming to improve performance using Python code You should have an understanding of first year college or university level engineering mathematics and physics and have some experience with Python as well as in any C based programming language such as C C++ Go or Java
