Jump Start Web Performance Craig Buckler, 2020-02-11 Despite working on the web every day few developers have a good word to say about the monster they've created Aching slow sites with annoying overlays cookie agreements instant notifications and obtrusive ads litter the web landscape While there may be some excuses for complex web applications there's little justification for sluggish content based and ecommerce sites People are notoriously impatient and an unresponsive site receives fewer visitors and conversions This practical short book provides advice tips and best practice for improving website performance ranging from quick five minute configuration changes to major website overhauls We primarily concentrate on front end activities and server configurations to optimize the code delivered to a browser Some back end tips are provided but this is often specific to your application framework database and usage patterns Server side performance can often be improved with additional or more powerful computing resources Ideally everyone involved in a project would consider performance from the start Somewhat understandably that rarely occurs because no one can appreciate the speed of a website or application before it's been created Many of the tips contained in this book can therefore be applied after your project has been delivered
